

Swimming Pool Opening Procedures

- ❑ Pump all water off the pool cover and remove all debris before removing the cover.
- ❑ Remove the cover from the pool, then clean thoroughly and fan fold neatly, and put it away.
- ❑ Install all fixtures such as, lights, handrails & ladders, diving boards, rope & float set, return eyes, skimmer baskets, etc.
- ❑ Brush down walls & floors, dip out all leaves possible, brush and clean the steps thoroughly.
- ❑ Clean the scum line along the tile border of the pool.
- ❑ Reinstall all plugs, gauges, sight glasses, backwash hoses, bleeder screws, chlorinators, and any other filter system components prior to starting system.
- ❑ Start the filter system and repair any minor leaks if possible, making sure that all unions, valves, and any hose connections are secure.
- ❑ Take a water sample, always before adding the start-up chemicals.
- ❑ Add the necessary start-up chemicals if the filter is running, if not, leave the chemicals in the customers possession.
- ❑ Make a note of any repairs that may need to be done.
- ❑ Start the water running slowing back into the pool with the customer's garden hose if needed.
- ❑ Tell the customer about any problems with the pool if they are present or leave the customer a note, where he/she can find it, stating any problems with the pool & that the water is running into the pool and should be checked upon their returning.
