

### LEGEND

#### Flood Zones

##### SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A - No base Flood Elevations determined.
- ZONE AE - Base Flood Elevations Determined.
- ZONE AE Floodway - The Floodway is a channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.
- ZONE AH - Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO - Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE VE - Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

#### OTHER FLOOD AREAS

- ZONE X SHADED - Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
- ZONE X - Areas determined to be outside the 0.2% annual chance floodplain.

Data Source: Federal Emergency Management Agency (FEMA) - September 2, 2004.
