

## Sick Chicken Diet

Feed once a day (in the morning) for three days or until she looks and acts better - up to 3 weeks.

This amount feeds one bird. Each serving consists of:

- ½ to 1 x cooked egg yolk... crumbled into mixture
- 1 teaspoon of cod liver oil
- 1 very small drizzle of honey
- 2 x tablespoons natural yoghurt no sugar
- 2 to 4 tablespoons rolled oats or Baby rice
- 1 dessert spoon of lentils
- A few grains of multi vitamin powder
- 2 tablespoons of grated apple

Mix to make a crumble mixture not runny, if you have to roll into pellets and force feed, and then gently massage the neck in a downward motion to get it down into the crop, then do it, the bird may be too weak to eat or have lost the desire to eat. If not fully eaten with in 12 hours throw it out. Make another one the next morning, don't add to it! Clean out the dish it was in also before adding the new mixture. Always have fresh clean water available at all time for the bird and good quality food. Also have her ordinary feed and fresh clean water available at all times.
