MIREILLE RIGAUX

Mireille Rigaux received the ASBA scholarship in 2003 while attending Olds College in the Land and Water Resource Program. She graduated with distinction with a diploma in Environmental Stewardship and Land Reclamation from Olds in 2005. She continued on to the University of Lethbridge in the Environmental Science program and graduated with a Bachelor of Science in Environmental Science in 2007.

Since graduation, Mireille has worked at EBA, an environmental and engineering company in Lethbridge, Alberta, as an environmental scientist. Her experience at EBA encompasses several areas including agriculture, the oil and gas industry, the private sector and landfills. Mireille has worked on a range of projects including urban Phase I environmental site assessments as well as groundwater compliance monitoring in Southern Alberta, BC and the Northwest Territories. She is also a team lead on several soils assessments in Southern Alberta on agricultural land for various projects.

Mireille has also managed several hazardous materials assessments to determine if materials such as asbestos, lead or pcbs are present in building materials. She has subsequently completed a number of asbestos abatement monitoring projects which ensure that asbestos removal is safe for the workers and the public.

Mireille lives with her husband Travis and their two dogs in Coalhurst, Alberta. With the help of the ASBA, Mireille was able to pursue a career in environmental science and she would like to pass on a big THANK YOU for the step up along the way!
