

GRAPHIC DESIGN

BBB Event Photography is a digitally based photographic company that operates with some of today's finest digital equipment.

The workhorse of the entire system is a Kodak DCS 620 digital camera attached to a Nikon F3 camera. Able to capture images at speeds from 2X to 1600 ISO, it can photograph in low light darkness as well as high speed action sports. Absolutely one of the finest cameras on the market today. It transfers images into a Dell Pentium III computer either by direct Firewire connection or by PROCHA Type-L or Type III imaging cards.

Once an image is selected by the customer it is printed by either a Sony UP-D50 8x7 printer or a Sony UP-D70 5x7 printer in approximately 30 to 65 seconds. The Dry Transfer Sublimation Thermal printing process produces full color black and white, or sepia tone photos with unmatched quality to sizes from 1.14" by 1.54" up to 6.5" by 11.7" in approximately 40 different sizes, package combinations.
