CHOOSE FROM TWO PHOTOGRAPHY STYLES

NATURAL

Natural photos are photographed in the natural environment of your team's sport or if the team/organization would rather use a different location, that is ok too. Athletes will all take their individual photos, then be positioned into a group formation for the team photo. The pros of natural photos are just that, they look more natural, and once the photos are taken they are slightly faster to process than the composites. The cons are that they typically take a bit longer to complete on the photo day, especially with the team groupings and setup/breakdown if there is a need to use shades and pop-ups.

Go to page 2 to see more.

COMPOSITE

Example of Player Poster

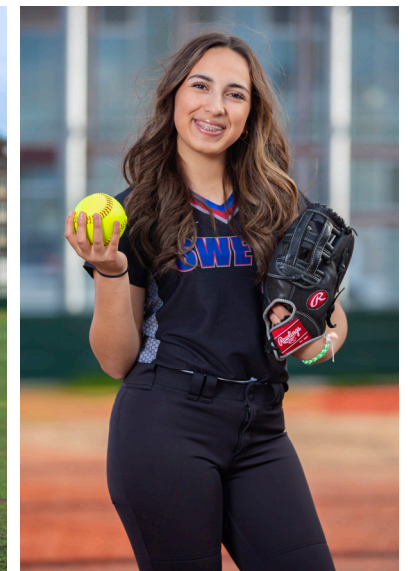

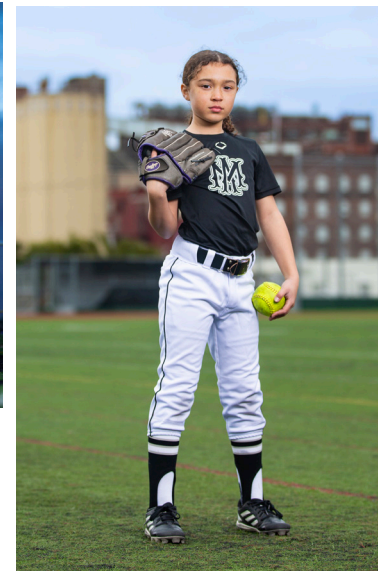

Composite photos are photographed on a green screen and give you endless customization options. Athletes will ONLY take individual photos and the team photos will be designed and built using those individual photographs. Once your athlete takes their individual photo, they are free to go! The pros of composite photography are that your photo day will be much faster. Each team can start and finish in under 15 minutes and there is no need to wait around to take the team photo, and the photo options are almost endless. You will be able to choose the background and resize the athlete to their liking. The con of composite photography is that it will take longer to process after your photo day.

Go to page 3 to see more.

ACTION PHOTOGRAPHY IS ALSO AVAILABLE

NATURAL TEAM & INDIVIDUAL

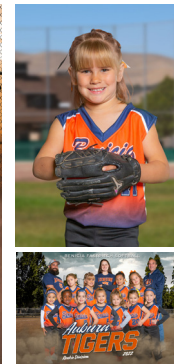

Team & Individual Photography | 2023

NATURAL PHOTOGRAPHY | Natural photographs are taken with the natural environment as the background. Photographs are taken on the field, gym, court, or in any location that you would like. The advantage of a natural photo is just that, it all looks natural. Photos are also faster to process and return to parents to view. The drawback is that there are fewer options and the team photographs tend to take a bit of time to set up.

COMPOSITES TEAM & INDIVIDUAL

Team & Individual Photography | 2023

COMPOSITE PHOTOGRAPHY | Photographing for composites allows us to create custom backgrounds and graphics for each league or team, giving your players endless customization options. Also, once your athlete's individual photo is taken, they are finished! No more waiting for a team photo to be coordinated and hoping everyone is looking at the camera. We will take the individual player images and bring them all together into a team photo, making sure everyone looks their best. Another advantage is that we can photograph indoors and there is no need to worry about the weather.

ACTION IN-GAME PHOTOGRAPHY

Team & Individual Photography | 2023

ACTION PHOTOGRAPHY | The only way to get a natural, realistic game face is to capture it in the middle of the action. We will photograph your athlete in their element, on the field, or on the court. Action photos can also be used to create amazing composite graphics, like player posters, trading cards, or banners.
