We own and operate a 20 year continuous corn farm (no soybeans). We also own and operate an independent chemical retail business in its 25<sup>th</sup> year near Hinckley (northern Illinois). Advice with spraying issues, please call 815-739-7700. Ask for Roger. We offer extended hours during spraying season.

Corn yields were very good in 2023: However rootworm damage on traited corn, mainly north of Interstate 80, continues to worsen. (We suggest Fence @ 5# to improve yields and standability.) Resistant waterhemp is going to require additional chemical and adjuvants for control in soybeans and high pressure areas of corn. We have modified our choice pages in 2024 to include better waterhemp control choices.

Supplies seem to be better this year than last. Most chemicals have experienced price declines.

Let your weed control success ride with us! Find a comfy easy chair, take 2 aspirin and enjoy your read.

Thank you for your business relationship, helping all of us achieve 25 years in business!
