

## Top performing Corn residual choices-1st pass in 2 pass program

<u>Proposed rate</u>	<u>Product</u>	<u>Current Price per Unit</u>	<u>Per acre cost range based on rate chosen</u>
2.0-3.0 quarts	Fearless Xtra 5.6	\$ 29.95 Gal.	Total \$ 18.71
Best seller - acetochlor & atrazine premix. Includes Atrazine. We do tank splits. 125-280 gallon in 5 gallon increments.			
	<b>OR</b>		
3.0-3.5 ounces	Corvus	\$ 5.49 Oz.	\$ 17.84
	<b>Plus</b>		
1.0-1.5 quarts	Atrazine (Cornbelt Brand) flows like milk	\$ 17.95 Gal.	\$ 4.48 - \$ 6.73
	<b>OR</b>		
2.0 pints	Staunch II (SureStart)	\$ 55.95 Gal.	\$ 13.98
	<b>Plus</b>		
1.0-1.5 quarts	Atrazine (Totes-Cornbelt)	\$ 17.95 Gal.	\$ 4.48 - \$ 6.73
	<b>Or</b>		
3.5-4.5 ounces	Balance Flex	\$ 3.79 Oz.	\$15.16
	<b>Plus</b>		
1.0-1.5 quarts	Atrazine (Totes-Cornbelt)	\$ 17.95 Gal.	\$ 4.48 - \$ 6.73
			Totals range \$17.96 - \$ 20.21
			Totals range \$19.64 - \$21.89

Optional-add to any above combos adding better residual grass and broadleaf control (pre-emerge)

4 ounce	Meso	\$ 69.95 Gal.	\$ 2.18
2 qrts/ton of UAN	N-Tice	\$105.00 Gal. Liquid nitrogen stabilizer	N rate?
5 #	Fence 3W	\$ 5.40-5.15 Rootworm Protection	\$ 26.37

## Roundup Ready Corn-Post Spray 2<sup>nd</sup> pass in 2 pass program

The following all tank mixed together

<u>Proposed rate</u>	<u>Product</u>	<u>Current Price per Unit</u>	<u>Per acre cost range based on rate chosen</u>
1-1.25 quarts	Buccaneer 5# Xtra (Uses top quality American made surfactants)	\$ 17.95 Gal	\$ 4.94
	<b>Plus</b>		
4 ounces	Meso (generic Callisto)	\$ 69.95 Gal.	\$ 2.18
	<b>Plus</b>		
0.5-2.0 pounds	Atrazine-enough post to equal 2# active for the year total (1 quart = one pound) Count both pre-emerge plus post emerge	\$ 17.95 Gal	\$ 2.24 - \$ 8.97
	<b>Plus</b>		
1 quart per 100 water	All-In 2	\$ 35.00 Gal.	\$ 1.31
			Totals range \$10.67 - \$17.40

Optional-add for waterhemp pressure acres

4 ounces	Safened Status (contact kill)	\$ 4.09 Oz.	\$ 16.36
4 ounces	Zidua SC grass and broadleaf (added residual corn and beans)	\$ 4.60 Oz.	\$ 18.40

## 2024 Herbicide Traits in Soybeans

**We suggest E3 or XtendFlex for the most spray options against waterhemp.**

**Enlist E3 Trait - For waterhemp control you need to add glufosinate** (Interline/Liberty) to post applied Enlist-One and the additional adjuvants ½ gallon per 100 crop oil concentrate and AMS. E3 trait seed is resistant to glyphosate (Buccaneer 5 Xtra), glufosinate (Interline/Liberty), and Enlist One (2,4-D choline). Simply adding glyphosate to Enlist-One is not adequate waterhemp control, partly due to a waxy leaf on waterhemp. Enlist-One can be used before planting (without a planting wait period) and/or after planting prior to R1 on Enlist soybeans. Observe weather and set back guidelines. Currently no cut-off date, just R1 growth stage cut off. Add adjuvant En-Pack or All-In 2 or AMS (liquid or dry) and crop oil concentrate. Add the crop oil concentrate last to the tank mix.

**Roundup Ready XtendFlex Trait** - It is resistant to glyphosate (PowerMAX), and Dicamba (Xtendimax), and glufosinate (Interline/Liberty). Xtendimax is the Dicamba product approved for pre-emergence and post emergence use on this soybean. Xtendimax can be applied before or after Xtend-Flex soybean trait planting, without a planting waiting period, as well as post emergence following weather and setback guidelines. Currently last spray date is June 12, 2024. Add adjuvant Shepherd Complete which includes both DRA and VRA.

**Non-Gmo No Trait** - Use a long lasting pre-emerge in conventional till, such as Authority Supreme. Post, use Fomesafen with waterhemp 4-5” tall with All-in 2 AND MSO adjuvants. For grass and volunteer corn, add clethodim. Anthem Maxx post is a choice also. (Keep Zidua rate under the max for the year when using Authority Supreme and Anthem Maxx.) Find your hoe and get it sharpened! No successful back up chemical available other than what is listed above.

Don't sink your boat with limited back up herbicide options!

## Soybean pre-emerge residual

All Post soybean choices need to be complimented with one of the Preemerge waterhemp killers.

<u>Proposed rate</u>	<u>Product</u>	<u>Current Price per Unit</u>	<u>Per acre cost range based on rate</u>
4-5 ounces	Authority XL (Best Value)	\$ 37.50 Lb.	\$10.54
<b>OR</b>			
5 ounces	Authority First (best for no till burn-down, tank mix with glyphosate, Reviton and MSO.)	\$ 49.95 Lb.	\$15.61
<b>OR</b>			
5 ounces	Authority Maxx (best for low OM soils)	\$ 39.50 Lb.	\$12.34
<b>OR</b>			
8 ounces	Authority Supreme (The Cadillac)	\$309.85 Gal.	\$19.36

You get value with Authority Supreme. Includes both of the longest lasting residuals, Authority and Zidua SC. **Greatly improves Waterhemp residual effect! Our best seller.**

### **Optional**

Consider adding to one of the basic pre-emerges, a low cost 6 oz. dry = 9 oz liquid.

4-6 ounces DF	Metribuzin DF	\$ 12.95 Lb.	\$ 4.04
<b>OR</b>			
6-9 ounces 4L	Metribuzin 4L	\$69.95 Gal.	\$ 4.10
Additional broadleaf control			

### **Optional**

Consider adding to one of the basic pre-emerges or early post.

1.3-2.0 pints	Parallel Tote	\$ 34.90 Gal. Tote	\$ 6.98
	Parallel 2.5 gal	\$ 36.95 Gal. Package	\$ 7.39

Parallel brand (has safener-for corn or soybean use.) It provides additional grass and waterhemp residual. We prefer pre-emerge application in soybeans but it is labeled for post also. Apply post prior to 4<sup>th</sup>-5<sup>th</sup> trifoliolate. (It will need rainfall to activate or incorporate.)

If Authority pre-emerge application is not completed, consider post Zidua SC or Anthem Maxx.

**Soybean Post Option #1**  
**Post applied XtendFlex trait**  
**Excellent weed control!**

Choose a pre-emerge from page 4.

<u>Proposed rate</u>	<u>Product</u>	<u>Current Price per Unit</u>	<u>Per acre cost</u>
1 quart	Buccaneer 5 Xtra Top quality surfactants made in USA	\$ 17.95 Gal.	\$ 4.49
32 ounces	Glufosinate (Interline by UPL) Do not mix different brands. Best surfactants	\$24.95 Gal.	\$ 6.24
(Spray Interline separately 2 <sup>nd</sup> pass, Xtendimax 1 <sup>st</sup> Pass)			
22 ounces	Xtendimax 2.5	\$ 59.95 Gal.	\$10.30
Plus			
30 ounces	Shepherd Complete Tote Shepherd Complete Package It is DRA and VRA combined in 1 product.	\$ 31.00 Gal. \$ 32.90 Gal.	\$ 7.26
For volunteer corn and grass			
9-11 ounces	Clethodim 2EC (11 ounces for grass) For added post residual-add Zidua or Parallel-see pg 6.	\$ 39.95 Gal.	<u>\$ 2.81</u>
<b>Glyphosate, Xtendimax, with Clethodim with all adjuvants</b>			<b>\$ 26.20</b>
<b>(Two pass ) (second pass) Glufosinate with Clethodim with all adjuvants</b>			<b>\$ 13.15</b>

**Good waterhemp kill**

# Soybean Post Option #2

## Enlist E3 trait

### Excellent weed control!

Choose a pre-emerge from page 4.

<u>Proposed rate</u>	<u>Product</u>	<u>Current Price per Unit</u>	<u>Per acre cost</u>
32 ounces	Glufosinate 280 SL (Interline by UPL) Do not mix different brands. Best surfactants-top quality post patent brand	\$ 24.95 Gal.	\$ 6.24
	<b>Plus</b>		
2 pints	Enlist One 2.5	\$ 59.95 Gal.	\$14.98
	Enlist One Tote	\$ 58.95 Gal.	\$14.73
	<b>Plus</b>		
1.5 quarts per 100	En-Pack	\$ 37.95 Gal.	\$ 2.14
	<b>OR</b>		
1.0 quarts per 100	All-In 2	\$ 35.00 Gal.	\$ 1.75
	<b>Plus</b>		
3 pounds AMS dry or liquid, use with glufosinate.		\$ 0.40 Lb.	\$ 1.20
	<b>Plus</b>		
½ gallon per 100 water	Crop oil tote	\$ 15.00 Gal.	<u>\$ 1.50</u>
	<b>Optional-For added grass and volunteer corn control</b>		
9-11 ounces	Clethodim 2EC 2.5s	\$ 39.95 Gal.	\$ 2.81
	<b>Total with Enlist One, Interline, Clethodim, All in 2, AMS, and crop oil.</b>		<b>\$28.23</b>
	<b>For added residual</b>		
4 ounces	Zidua SC (longest lasting)	\$589.00 Gal.	\$18.40
1.5 pints	Parallel	\$ 34.90 Gal.	\$ 6.54

### Good Waterhemp Kill

When Waterhemp is a target weed, glufosinate is a needed tank mix with Enlist one. Also the following adjuvants needed-All-in 2, AMS and ½ gallon per 100 Crop oil concentrate.

# Soybean Option #3 Non-GMO Food Grade

Choose a good quality pre-emerge from page 4.

<u>Proposed rate</u>	<u>Product</u>	<u>Current Price per Unit</u>	<u>Per acre Cost</u>
9 ounces	Authority Supreme (pre-emerge)	\$309.85 Gal.	\$19.36
1.3 pints	Fomesafen-needs perfect timing.	\$ 39.95 Gal.	\$ 6.49
	Plus		
1 gallon per 100 water	MSO (metholated seed oil)	\$ 19.00 Gal.	\$ 2.83
	Plus		
1 quart per 100 water	All-In 2	\$ 35.00 Gal.	\$ 1.31
	Optional for Volunteer Corn-7 oz.		
7 ounces	Clethodim 2EC	\$ 39.95 Gal.	\$ 2.18
		<b>Total with Clethodim 2EC</b>	<b>\$ 32.17</b>

One sharp new hoe (\$20.00)

Oops!  
Helps when Roger closes the slide valve.

**Seed + Graphite planter lubricant** – Includes micronutrients and a biological. Available in 5# (80 oz.) jugs premixed with 80% talc and 20% graphite. Seed corn use rate of 8 oz. per 100# seed.

One bottle does approximately 1,000# of seed corn. Cost for corn is approximately \$2.71 per acre. Replaces currently used talc-graphite.

Soybeans and wheat use rate of 4 oz. per 100# seed. Cost in soybeans is approximately \$3.12 per acre. Certified for organic use.

### **First pass corn with residual (2 pass program)**

Fearless Xtra 5.6, Harness Xtra 5.6, and Volley ATZ NXT are all three identical premixes of acetochlor and atrazine, manufactured in the same factory in Muscatine, Iowa. (2 modes of action-different than glyphosate). Best rating on fall panicum @ 3 quarts. Application choices are ppi, pre-emerge, or early post-emerge. It's best to apply early before weeds have emerged. Post patent Callisto (Meso) @ min. 4 oz. (\$2.18 acre) may be added to this pre-emerge also, providing additional residual. Using a 2.5 quart rate of Fearless Xtra, the door is still open for post glyphosate, meso, atrazine, Status and All-in 2.

We do NOT recommend applying a Fearless Extra 5.6 tank mix with any other products on corn POST-emerge. Fearless Xtra 5.6 is an oil base and can get hot on crop, when tank mixed with other products post. If you think an early post application of a tank mix with glyphosate is a possibility, I would choose a different product like Staunch II (same as SureStart II or TripleFLEX II). Staunch II is a premix of a low rate of acetochlor, Python and Stinger, but contains no atrazine. Two quarts atrazine should be added to Staunch II.

Glyphosate may be tank mixed with Staunch II providing three modes action. We do NOT recommend Staunch II be applied pre-emerge. Staunch II applied early post works well at 2 pints plus 1.5-2 quarts atrazine plus glyphosate. If waterhemp has emerged prior to post application of Staunch II, generic Callisto or Status should be added to Staunch II. Adding either safened Dicamba (DiFlexx @ 1 pint) or (Status @ 4-5 oz.) should kill waterhemp up to 15" height.

North of Rt. 80, adding generic Callisto with Staunch II/atrazine can kill waterhemp and provides residual while costing much less than DiFlexx. If grass has emerged prior to post application, add glyphosate also to Staunch II. Don't wait till corn and weeds are 12" tall to spray. Another choice would be Acuron, with four modes of action, as an early post product with residual. Rainfall or tillage incorporation within 48 hours helps. (Read the label). Do not add Meso to Acuron post (it already includes it).

Additional top performing corn first pass residual products include Corvus, Balance Flexx, and Parallel with safener. (Generic Dual II.) Parallel applied pre-emerge has the best yellow nutsedge control. Corvus/atrazine has the very best burcucumber control! Spray Corvus and Balance Flexx before V2. Add 1.5-2 quarts of atrazine to all three products for additional synergistic, low cost, weed kill performance.

### **Second pass corn with residual (2 pass program)**

We suggest layering of overlapping residual products. Waterhemp has a late and long germination time throughout the summer. The average first germination is around first week of June in northern Illinois. Also, a long-lasting residual is needed to be tank mixed with the post glyphosate pass. Three to four ounces Meso provides the longest lasting residual on all broadleaves at a reasonable generic price. Atrazine MUST be added to Meso/Status for an attempt at season long waterhemp control! Minimum of 1 pint (1/2 # A/I) or more atrazine provides a synergistic effect with many post corn products. We only sell top quality atrazine brands reducing sprayer, filter and nozzle plugging. **Either dry weather or additional waterhemp resistance or both reduced the normal kill performance in 2023.** A safened dicamba (Status) should be added on heavy pressure acres reducing the need for an additional pass. A post applied tank mix of a robust glyphosate rate, atrazine, Meso. Status and All-in 2, has top quality control with excellent crop safety. See costs post corn on page 2. In our testing, north of Route 80 in Illinois, this tank mix has consistently killed waterhemp up to 15" tall and has provided successful residual control throughout the summer. Waterhemp is easier and cheaper to control in corn than soybeans.

**For residual post broadleaf and grass control in corn**-Laudis, Capreno, and Impact - corn only - All 3 are good broadleaf and fair to poor grass residual partners depending on the year. Capreno offers best post fall panicum rating and more grass residual control than the other two however Capreno has an earlier application window. Laudis and Impact are so safe they are a good fit for seed corn, sweet corn and non-gmo corn. This has excellent crop safety because they include safeners. Atrazine and All-In 2 should be added to any of these.

**Atrazine**-Totes are top quality Cornbelt brand while supply lasts. Top quality atrazine provides one of the most overlooked, best value weed control programs for corn. Tank mix it with glyphosate and many other products pre or post. (1 qt.= 1# a/i atrazine.) It helps control small seeded weeds like lambsquarter, which were not emerged at time of application. Low cost and best crop safety of anything! Atrazine provides a synergistic effect (increased kill effect) when mixed with many post products in the above two paragraphs.

### **Corn and Soybean with RR trait-no residual**

Glyphosate – Currently price reduction for 2024. Buccaneer brands use top quality surfactants. 24 ounces of 5# glyphosate = 32 ounces of 4# glyphosate. Products are factory packaged in new 265 gallon shuttles, unless you order a partial tote. FULL totes are not filled at retailer using used totes. We also sell Roundup PowerMAX III which has a 20-32 or more ounce use rate.

### **Insecticide**

A generic is available for Force 3G. Its name is Fence 3W. It has the same 4.4-5.5# rate as Force 3G. Highly recommended on traitled corn in northern Illinois and Wisconsin. Traits are not protecting us like they used to. We use on all corn acres with very good results. (20 year continuous corn.)

**A 25 cent per pound discount applies for over 4000# orders of Fence 3W.** Aztec 4.67G in a bag or Smartbox, apply 3.27# rate. Aztec charges for calibration for bags. Call 888-762-7826, choose option #2. Fence charges \$15 per row for calibration. Bifenthrin LFC liquid (liquid fertilizer compatible) same use rates as Capture LFR. It may be applied in furrow or 2X2. For rootworm control, use 14-15 ounces. Label rate has been increased for rootworm allowing for 17 ounce max rate. We only sell top mixing performance UPL brand.

### **Liquid Insecticides with fungicide**

For post, early tassel tank mix with fungicide on corn, use Mustang Maxx @ 1-2 oz., with Bifenthrin 2EC @ 6.5 ounce. Very safe to the applicator and little odor. Would expect approximately 1 week to 10 days residual against Japanese beetles, depending on weather conditions. It has longer control for rootworm beetles. As years move along, however the rootworm is adapting to provide itself a longer and later beetle hatch of 2 months now. Fifteen years ago, hatch lasted 2-3 weeks. For soybeans only, systemic Imidacloprid @ 2.5 oz. has long residual, a quick kill and great combo with fungicide. **Still a low cost of \$3.49 acre.**

### **Adjuvants for Glyphosate, Glufosinate, Enlist One and Xtendimax**

**All-In 2** “The Blue Gue” includes anti-drift, liquid ammonium sulfate, an anti-foam agent, Ph adjuster, anti evaporator, improved herbicide translocation and droplet retention, while greatly reducing rain-fast time. All-In 2 does not cause adverse sprayer issues. Liquid All-In 2 costs only 18 cents more per acre @ 10 GPA than dry AMS. (That is \$18 on a 100 acre field @ 10 GPA.) It works well with a low use rate of 1 quart per 100 gallons of water under calm to moderate wind conditions. Up to 2 quarts per 100 may be used under adverse wind conditions. All-In 2 works well as an AMS replacement with any corn and soybean post chemicals that require AMS with the **following two exceptions**: Glufosinate/Liberty and the low drift Dicamba brands (Xtendimax). Use AMS Liquid (2.5 gal per 100) or dry AMS (3-4 lbs. acre) with Glufosinate/Liberty and add ½ gallon per 100 crop oil also. When spraying Xtendimax, use only approved Shepherd Complete at 30 oz. per acre with any brands of low drift dicamba. If sprayed without glufosinate, Enlist One should use approved En-Pack @ 1.5 quarts per 100 water or All-in 2 at 1 quart per 100 water. If Enlist-One is sprayed with Interline, add AMS liquid or dry, and ½ gallon per 100 crop oil concentrate (add COC last).

### **Burn down – Reviton**

Currently, Sharpen seems to be difficult to purchase and high priced. A generic look alike, named Reviton @ 1-1.5 oz. burn down only, is a popular addition to glyphosate. It greatly improves burn down speed and performance and kill of resistant weeds. Always add MSO @ 1 gallon per 100 with Reviton. Best part, no planting delay in corn or beans. A pre-emerge residual product can be added also in this trip. Following Reviton use, rinse sprayer before post spraying crops. It will kill an emerged crop. Adding 2,4-D LV6 @ 1 pint greatly improves dandelion and marestail control. Delay planting 7 days when adding LV6. Or use Enlist One traited seed with no planting delay. A pre-emerge should be used on all soybean acres (see soybean pre-emerge). No matter if they are traited with glyphosate, XtendFlex, Enlist or E3. For no till acres, Zidua Pro contains Sharpen and currently we have supply on the floor.

### **Soybeans Pre-emerge**

All soybean acres should be sprayed with a pre-emerge residual such as Authority XL @ 4-5 oz., Authority Maxx @ 5 oz., Authority MTZ @ 16 oz., Authority First @ 4.5-6 oz. (best for no-till), or Authority Supreme @ 8-9 oz. Authority Supreme is “The Cadillac” providing the two best longest lasting products, Authority and Zidua. All five provide long residual and best waterhemp rating of all pre-emerge choices. They are our best sellers. Low cost Metribuzin may be added to many soybean pre choices, costing \$3.73-\$5.60 per acre. Parallel (Generic Dual) @ 1.3-2.0 pints is another choice providing additional grass and pigweed family (waterhemp) control. Cloak (4 oz.) has best burcucumber rating and costs less.

### **Soybean Post residual**

If wanting to add residual post, consider Zidua SC. We have good supply on the floor. If mixing Anthem Maxx (Zidua/Cadet) and clethodim post, only add surfactant, not oil. Oil is too hot with Anthem Maxx.

### **Soybeans Post-emerge**

Post pass in RR soybeans-when waterhemp is a target weed-use one of the two following post soybean trait recommendations. The Enlist-One E3 program mixed with Interline/Liberty is working well. XtendFlex is working well also and with Xtendimax program. Interline/Liberty is not needed in 1<sup>st</sup> pass only glyphosate.

### **Soybeans-Volunteer corn control**

Clethodim 2E kills volunteer Roundup Ready corn. Liberty will not kill volunteer Smartstack corn, which some multi stacked seed contains. Clethodim 2E can be tank mixed with your glyphosate or glufosinate. If using an XtendFlex or Enlist soybean program, 9-10 oz. needs to be used instead of 7 oz. due to antagonism between the Dicamba / 2,4-D and Clethodim 2E. No mixing problem just reduced performance on only the Clethodim 2E. Kill time is very slow 3 weeks.

### **Top Rated Fungicides for corn and soybeans**

Fungicides-starting with best value and ending with most expensive:

6.8 oz.	Zolera FX	\$13.91 acre-The best value Dual active/long lasting
13.7 oz.	Trivapro	\$20.65 acre-Triple active
10 oz.	Delaro	\$22.10 acre-Dual Active
13.7 oz.	Miravis Neo	\$22.26 acre-Better than Trivapro-Triple active
8 oz.	Revytek	\$23.06 acre-Plant health, Triple active, best fungicide

Always add a low cost insecticide to the fungicide. Bifenthrin 2EC and Mustang Maxx.

## Company Details

We prefer 125 gallons minimum for tote fills in 5 gallon increments. Thanks, Roger.

We maintain 25,000 square-foot heated warehouse. Plus 5,000 square-foot non-heated warehouse.

For larger qualifying orders placed prior to February 20, 2024 we offer free delivery in one of our own trucks covering an area of approximately the northern 2/3 of Illinois, southern Wisconsin, eastern and southern Indiana and eastern Iowa, as our time and truck capacity allows. We strive to complete all semi deliveries prior to April 1st, as we farm also and want to be ready to start planting. **PLEASE! Your flexibility when scheduling the free delivery would be appreciated,** helping us coordinate other stops in the same load in your area. Outside of our delivery area and in season, short notice, we offer freight truck delivery to Midwest farms for \$135 per pallet or tote. We utilize mainly DD Express, for IL., WI., Iowa , and MO. We also use Dohrn Transport to Indiana and Dayton and Pitt Ohio Freight to Ohio and Michigan. In stock products ship same or next day. Outside the Midwest, call for a freight quote.

We have a no return policy on all products. Many of our suppliers are doing the same for 2024.

For chemical issues please call Roger on his cell 815-739-7700-prefer text or voice and put this number in your contacts.

For other office questions call Bev at 815-739-7702. Email LVFI@indianvalley.com
