Kill Viruses in 30 Seconds with the Aqueous Ozone Sanitizing Spray Bottle

Alexandria, Virginia – Save the World, LLC in partnership with O3 Waterworks, LLC are sanitizing the world one household at a time with the revolutionary new way to clean and disinfect! Introducing the environmentally-friendly Aqueous Ozone Sanitizing Spray Bottle that has been proven to eliminate 99.9% of the SARS-CoV-2bb Human Coronavirus in 30 seconds!

Take everything you know about cleaning and throw it out the window because the Sanitizing Spray Bottle will replace all of your cleaning products with just one, eight ounce bottle that lasts up to 600 refills (3-5 years)! With a simple addition of tap water, and a pull of the trigger, the aqueous ozone is activated inside the bottle to create low-concentrated aqueous ozone that breaks up germs and bacteria without leaving a residue. And, once you're done cleaning, the bottle recharges until you are ready to clean again.

The non-chemical aqueous ozone bottle is perfect for disinfecting your home. It's safe to use everywhere! It works great for cleaning fruits and vegetables, countertops, bathrooms, toothbrushes, toys and even your pets! With the Sanitizing Spray Bottle there's no need to have chemicals in your cabinets anymore. Our safe and effective bottle eliminates the need for everyday cleaning products such as perfume filled room deodorizers, glass cleaners, harmful disinfectants and bathroom cleaners.

The science behind the bottle is groundbreaking! When you press the trigger on the bottle it bubbles oxygen (O₂) and water (H₂O) through a proprietary and patented diamond electrolytic cell. An electric charge briefly separates the O₂ molecules into O-atoms that reform into loosely held ozone molecules that oxidize and destroy harmful microorganisms then return to form pure O₂ molecules.¹

The bottle generates aqueous ozone that is created when you press the trigger to activate the water, allowing you to disinfect your home while being environmentally friendly. Built in LED lights indicate when the bottle is making ozone or when it needs to be recharged. No need for added clean up either! Once you're done disinfecting, the bottle returns to an oxygen and water state that will evaporate with no residue - meaning no rinsing is required.

The Sanitizing Spray Bottle is fun for all ages to use and perfectly harmless. Protect your home against chemical invaders and have peace of mind knowing that little ones are safe from chemicals and that your home is fully sanitized. Take back your cabinets from chemical cleaners! Our Sanitizing Spray Bottle is easy-to-use and accessible! You'll never worry about running out of cleaning products or having to rush to the store just to find the cleaning shelves empty.

Buy today for only \$199 at SaveTheWorldLLC.com, and replace every cleaning product in your home!

¹ How to Generate Aqueous Ozone by O3 Waterworks: SaveTheWorldLLC.com.

The Aqueous Ozone Sanitizing Spray Bottle (manufactured by Enozo Technologies, Inc.) is classified as a pesticidal device under EPA regulations. It has demonstrated effectiveness against viruses similar to SARS-CoV2 (COVID-19) on hard non-porous surfaces employing test methods recognized as scientifically valid in the field.
