Committed SLA

Enterprise IT infra

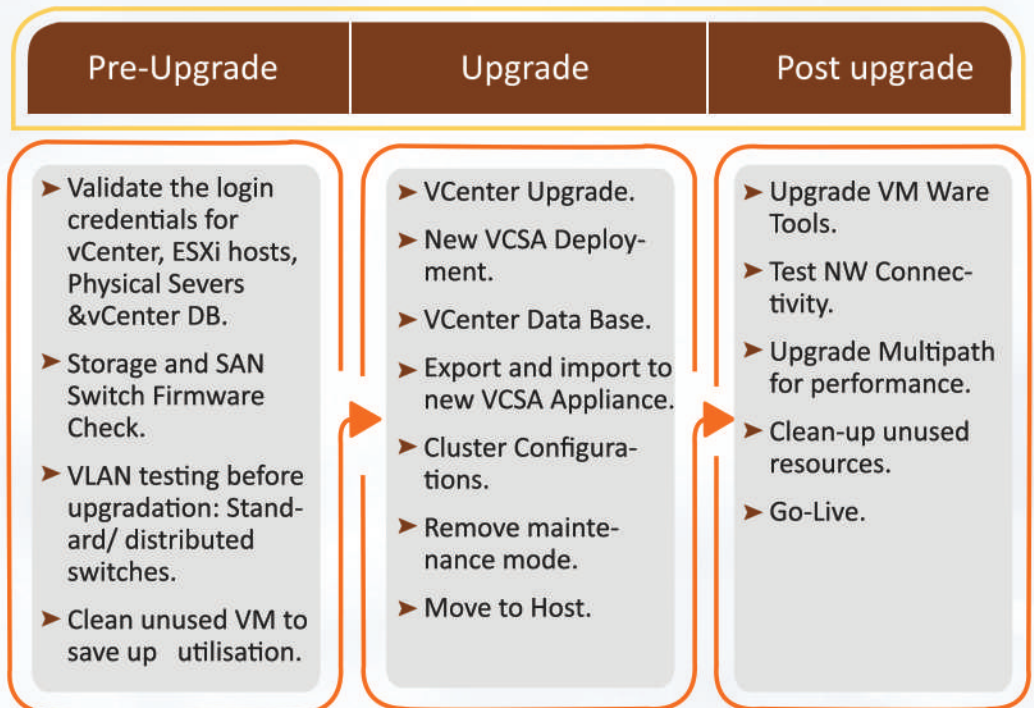

❖ Networking Consultancy Services

- Auditing of existing network design
- Fine Tuning, Updates & Reconfigurations
- Tech-refresh requirement study
- Network Device Life Extension Plan to save cost

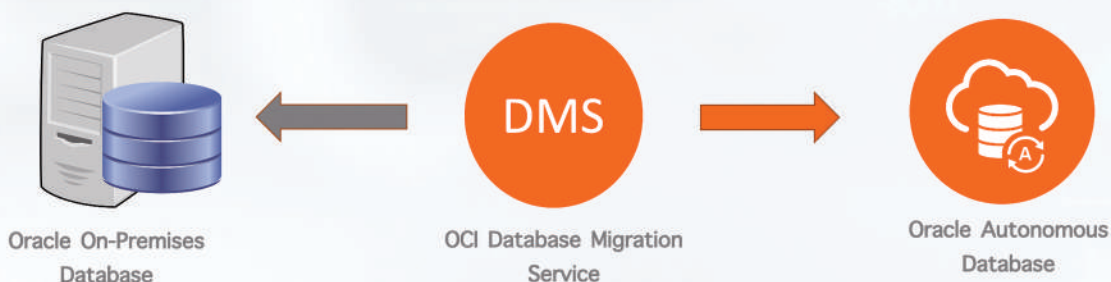

❖ VM Ware Implementation / Migration

- Certified Solution Provider
- VM Ware Migration Services
- VM Ware Upgradation Services
- VM Ware license renewal services

❖ Oracle Database Migration & Support

Oracle migration processes and procedures transform existing versions or releases of Oracle databases (including their applications) into different versions or releases. ... We have an expertise practice to Install , Configure and Migrate from all the versions of Oracle Data Base.

Virtual Desktop (VDI) & App Virtualization

- Low OPEX cost
- Low Energy
- More value for your Time
- Highly Secure
- Data Security
- Low Management Cost

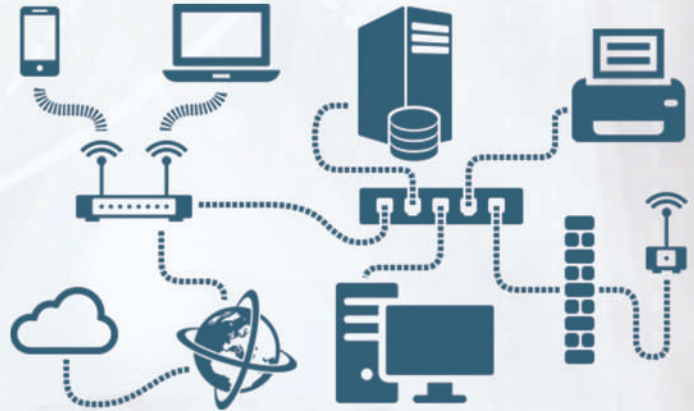

Virtualization enable enterprises to work from home without compromising the security, saving considerable amounts of time & cost for the company. Our solution empower end users to securely access to the corporate infrastructure from any unmanaged devices working at any location. For enterprises solving the work from home challenge, Workspace virtualization seems to be the exact technology that fills the missing piece in the puzzle.

Network Integration

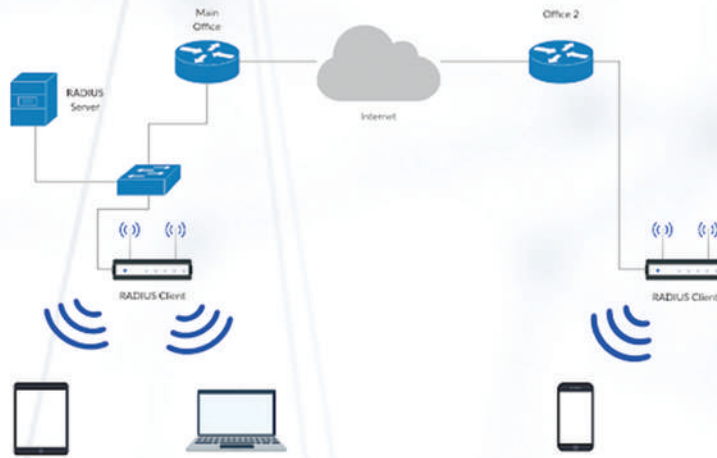

Managed Network Switches & Routers:

Innovationtq will Install and configure From core to edge switch solutions for businesses of all sizes and requirements

From LAN,WAN, Compact LAN, LAN Core and Distribution switches, Cisco network switches are deployed the world over - talk to us about the right Cisco Switch for your business or organisation.

Having worked alongside Cisco Systems for over a decade, we have deployed, configured and supported all manner of Ethernet switch solutions, from small business and large multi-site corporate projects and roll-outs.

Aruba / Cisco Wireless

Enterprise-grade Wireless LAN Controllers from Cisco:

We have experienced engineers to carry out Medium to large wireless (wi-fi) Projects from design to implementation.

Technology Products & Solutions

NETWORK INFRASTRUCTURE:

Cisco, Juniper & HP Aruba:
Switching, Routing, Wireless, Load Balancer,
Telephony, Network Security

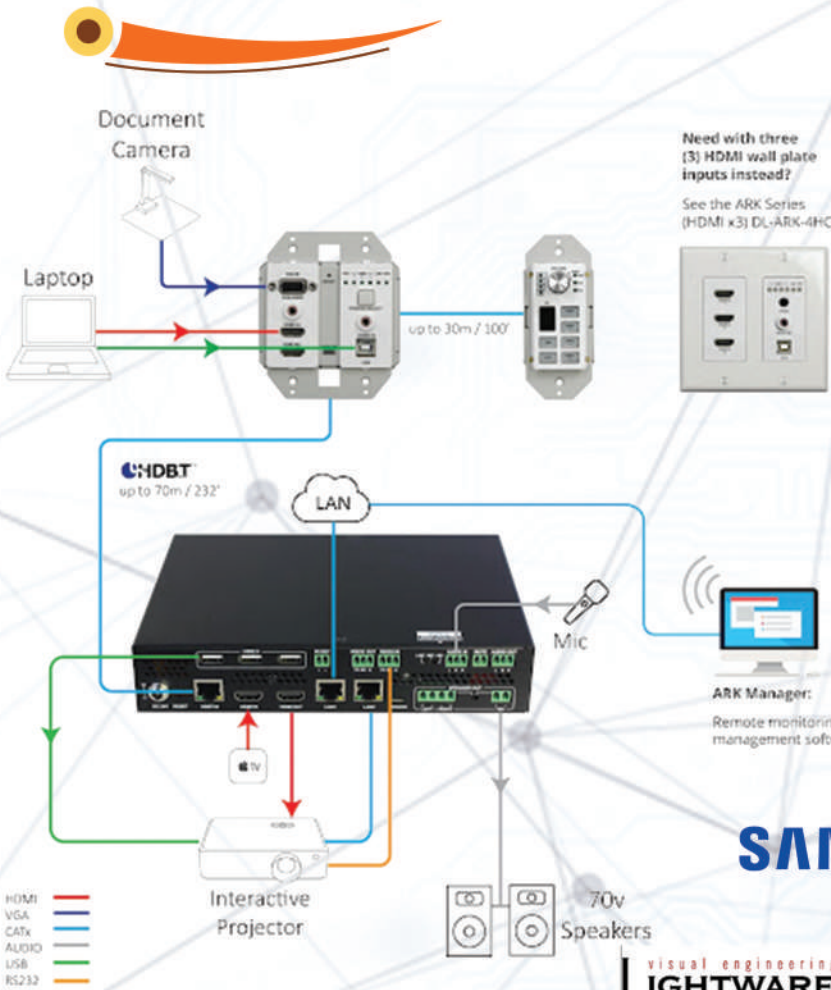

DATA CENTER INFRASTRUCTURE:

HP,NetApp, Checkpoint, Fortinet, EMC, Emerson:
Server,Storage,TapeLibrary, Firewall, PAC,

LAPTOP/DESKTOP& Mac:

PC's/ Laptop's/ WS/ Printer/ Scanner/ Projector/
Mobile Devices/ POS / RFID

Structured Cabling Solutions

A smart structured cabling system is a complex process that takes careful planning. Black Box wants your system to run reliably so your company is ready for expansion. Future capacity requirements are just one of the considerations made when designing your structured cabling system. We will ensure your network is running as efficiently as possible with the best cable and software available.

A smartly planned structured cabling infrastructure can enable transformation at the intelligent digital edge now and for years to come. We can design, deploy, and manage structured cabling systems for one site or a global deployment.

Services Approach

Innovationtq has Adapted and optimised lifecycle design methodology To provide the efficient support to the End Customers.

Service Overview

We provide Enterprise Network Installation Services is an IT Systems firm that provides Active network design, installation, and project management services over the spectrum of Data, voice-Video Wireless & security technologies.

We serves a wide variety of industries, including commercial accounts, manufacturing facilities, universities , healthcare organizations, and government. We have built a reputation for professional installations with a common-sense and responsive approach to problem solving. From multi-building campus environments and data centres, to classified clean rooms, we have the expertise, resources, and experience to handle any IT environment.

Data Centre Shifting

Wireless Survey

WiFi Health-Check Survey:

There is little worse than investing a great deal of time, effort, and money, into something, only to find that the quality or performance falls short of expectation. Sometimes, wireless networks can develop - among other things - connectivity, coverage or authentication issues, areas of limited or zero coverage or increased interference, all of which will inevitably result in a poor end-user experience and can be a headache for your IT staff to remedy.

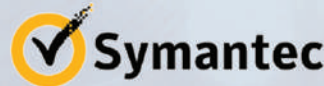

-  Post Installation Commissioning Survey
-  Predictive/Estimated/Pre- WiFi Survey

Onsite WiFi Wireless Survey:

Although our predictive site surveys provide a great deal of detailed RF information, the most accurate way to plan RF behaviour, and to ensure both wireless coverage and performance, is to perform an onsite wireless survey (sometimes referred to as a 'Physical Site Survey').

An onsite wireless survey requires one of our skilled engineers to be onsite - chargeable at our daily rate - where the latest in surveying equipment technology is used to complete a range of tests aimed at identifying variable levels of signal strength, wireless coverage and RF interference. The resulting data will highlight areas of optimal performance, as well as recommendations for hardware procurement, hardware placement and on-going maintenance.
