

## SP6492B: 6W Power Amplifier, 2.3-2.4 GHz

### General Description

The SP6492B is a high efficiency 6 W power amplifier suitable for application in FDD and TDD small cell base stations as well as general purpose amplification. It operates over a frequency range of 2.3 GHz to 2.4 GHz. The RF input and output ports are internally matched to 50  $\Omega$  for the full frequency range. This device incorporates a device enable pin with turn on/off times less than 1 us.

The power amplifier has high gain and peak power which linearizes well in DPD systems giving better than 50 dBc ACLR for 20 MHz modulation bandwidth.

This amplifier uses a Doherty architecture to improve back-off efficiency required by modern communications standards which employ high peak-to-average signals. A functional diagram of the SP6492B is shown in Figure 1. The RF input does not require a DC block provided the input connection is at 0 V DC. The RF output has an internal DC block.

### Applications

- LTE/5G Small Cell applications
- MIMO Systems
- Supports Multiple 3GPP bands
- Driver amplifier
- General purpose wireless

### Features

- Frequency 2.3 GHz to 2.4 GHz
- High Peak Power 37.5 dBm
- High Efficiency 32%
- High Small Signal Gain 37 dB
- Instantaneous Bandwidths up to 60 MHz
- Single Supply Domain +5 V
- Enable/shutdown pin
- Package: 5x5 mm

## 2 Electrical Specifications

**Table 2 Absolute Maximum Ratings**

Parameter	Min	Max	Units
Supply Voltage		5.5	V
Control Pin Input Voltage		2.8	V
Peak RF Input Power (LTE 20 MHz modulated 8.5dB PAPR signal)		3	dBm
Maximum Junction Temperature		150	°C
Storage Temperature	-55	125	°C

Table 2 Absolute Maximum Ratings notes:

- Exceeding absolute maximum ratings may cause permanent damage. Operation should only occur within the limits specified. Operating between the maximum operating range Table 5 and the absolute maximum for extended periods may reduce the reliability of the device.
- Not recommended for pulsed CW operation

**Table 3 Handling Precautions**

Observe standard procedures as with other ESD-sensitive devices when handling the product. The product includes ESD protection circuitry, but precautions should be taken not to exceed the ratings specified in this table.

Parameter	Level	Test Standard
ESD voltage HBM, All Pins	1kV	JS-001-2017
ESD voltage CDM, All pins	500V	JS-002-2018

## 4.1 Power-Up / Down Sequence

The device power-up sequence is as follows:

- 1) Terminate RF input and output with 50 Ohm
- 2) Connect DC ground
- 3) Ensure PA Enable is set to Low
- 4) Connect Vcc1, Vcc2, Vcc3 & Vbias to +5 V
- 5) Set PA Enable High to +2 V
- 6) Apply RF at PA Input at -30 dBm

The power-down sequence is the reverse of the power-up sequence.

It is important to ensure that ohmic losses in the power supply feed are accounted for and that the voltage at Vcc1,2,3 & Vbias are adjusted to 5.0 V at the operating condition.
