## East Tennessee Children's Hospital

## Six Sigma Black Belt Project Patient Non-Chargeable Supplies Order/Inventory/Stock Analysis

Isaac B. Mitchell<br>Director, Lean Continuous Improvement<br>East Tennessee Children's Hospital 865-541-8304<br>ibmitchell@etch.com

## East Tennessee Children's Hospital

- Private, independent, not-for-profit pediatric medical center
- The only comprehensive regional pediatric center in East Tennessee
- 152 bed hospital with over 155,000 patient visits a year
- www.etch.com

## Define

## Project Charter

- Project Name: Patient Non-Chargeable Supplies Order/Inventory Analysis
- Black Belt : Isaac Mitchell, Lean Coordinator
- Champion: Rudy McKinley, Vice President for Operations
- Master Black Belt: Larry Aft, IIE Six Sigma Instructor
- Start Date: October 2013
- Completion Date: May 2014 4

## Team Members

- Larry Murphy - Director of Materials Management
- Ed Wood - ED Assistant Nurse Manager
- Diana Burdick - $2^{\text {nd }}$ Floor Nurse Manager
- Cindy Abraham - $3^{\text {rd }}$ Floor Nurse Manager
- Margie McKelvey - Clinic Nurse Manager
- Debi Dobbs- OPS/IPS Nurse Manager
- Lori Smith - NICU Nurse Manager
- Bill Chesney - PICU Educator
- Gabrielle Knoll - Lean Intern
- Hayley Edwards - Lean Intern
- Leandra Church - Lean Intern
- Steven Burbank - Lean Intern

## Charter Approval - 3/7/14

Implement

## Process

- Inventory: Specific personnel (Secretary, Assistant Nurse Manager, Nurse, Tech) on each unit manually counts supplies in each supply room. No defined inventory levels are set in each unit.
- Ordering: List of supplies is used for manual order entry in Meditech information system.
- Delivery: Supplies are delivered in bulk to each storage unit by Materials Management Receiving Clerks.
- Stocking: Specific personnel (Secretary, Nurse, Tech) on each unit stock shelves.

## SIPOC Diagram ---- ETCH Inventory Process

## SIPOC Diagram ---- Materials Management

## Materials Management Process

Unpack rushed supplies and deliver to
necessary
departments

Manually pick-up rush orders from
supplier(s)
via Meditech

```
Order necessary supplies
```

```
Order necessary supplies
```

Match new shipments with their PO\# and Requisition Form (Daily
Shipments + Special Orders that generally arrive MWF)
Unpack new shipments and prepare supply buggies for each department (morning)

Deliver loaded buggies to each department (afternoon)

Define

## Project Description

- Purpose:
- Reduce the time and cost associated with inventorying, ordering, and stocking patient nonchargeable supplies on the nursing units.
- Eliminate cost associated with holding inventory levels.
- Scope:
- Emergency Department, $2^{\text {nd }}$ Floor Inpatient, $3^{\text {rd }}$ Floor Inpatient, Clinic, NICU, PICU, Outpatient Surgery, and Inpatient Surgery

## Impact to the Business

| Metric | Baseline | Goal | Units |
| :---: | :---: | :---: | :---: |
| 1. Time to inventory | 17 minutes | 1 minute | Minutes per room |
| 2. Cost to inventory | Confidentia |  | \$USD per hour |
| 3. Time to order supplies | 19 minutes | 10\% reduction | Minutes per order |
| 4. Cost to order supplies | Confidentia |  | \$USD per hour |
| 5. Time to stock supplies | 31 minutes | 10\% reduction | Minutes per department |
| 6. Cost to stock supplies | Confidentia |  | \$USD per hour |
| 7. Expired Supplies | 33 | 50\% reduction | Occurrences of Expired Supplies |
| 8. Inventory Level | \$3,254,900 | 25\% reduction | Total value of supplies in nine department annually |

## Business Results

- Results will be delivered in the first department by the end of the project on May $16^{\text {th }}, 2014$.
- The project will eliminate the labor cost of $\$ 59,000$ associated with the inventorying, ordering and stocking of theses supplies annually.
- The project will also reduce the holding value of supplies by \$813,000 annually.

## Benefit to Final Customer

- Customer: Patients and Families
- Goal:
- Provide supplies needed to take care of our patients and families needs at all times.
- Provide lower operating cost
- Eliminate the opportunity for errors to improve quality of patient care.

## Schedule

- Project Start: 10/11/13
- D - Define: 10/14/13
- M - Measure: 2/28/14
- A - Analysis: 3/14/14
- I - Improve: 3/28/14
- I - Implement: 4/11/14
- C - Control: 4/25/14
- Project Completion: 5/16/14

## Measurements

1) Task Responsibility by Job Class
2) Patient Non-Chargeable Supplies Fulfillment Process
3) Inventory Time and Cost
4) Ordering Time and Cost
5) Stocking Time and Cost
6) Expired Items Occurrences
7) 5S Compliance
8) Inventory Levels and Holding Cost

## (1) Task Responsibility and Frequency Survey

Email survey sent to department managers on
$10 / 18 / 13$ to determine who is responsible for each task by unit.

1. Who is responsible for taking inventory?
2. Who is responsible for stocking non-chargeable supplies in your unit?
3. How often do you take inventory?
4. What days and times do you typically take inventory?
5. What days and times do you typically order non-chargeable supplies?
6. What days and times do your typically stock non-chargeable supplies? Define $>$ Measure
 . $\qquad$

## (2) Process Diagram

- Document using a process diagram how each department inventories, orders, and stocks supplies.
- Is there is standard method?
- What is best practice?
- Are there different methods within a department?
- What is the system?

## $(3,4,5)$ Data Collection Sheets

- Data Collection sheets were given to each target department to collect time spent ordering, inventory, and stock supplies.
- Two weeks of data was collect per department.
east tennessee
Children's Hospital

## (6 \& 7) Expired Items and 5S Occurrences

- Pharmacy audits each area for expired supplies and 5S effectiveness.

## 8) Inventory Levels

- Review Meditech Information Systems Order History

## - How much inventory are we holding in each unit?

## - What is the value of that inventory?

## $(3,4,5)$ Recommendations for Future Observations

- When observing the data provided by the floors, a trend was seen to only provide data for ordering and stocking.
- This showed that most employees consider inventory and ordering as the same task.
- Going forward in data collection we may need to combine inventory and ordering as one task get more accurate numbers.

## (5) Pre Stocking Times Chart

## X-mR Control Chart

Define

## $(3,4,5)$ Pre Data Interpretation

- In order for data to be considered in control, $95 \%$ of the data should fall within UCL and LCL parameters. The plotted observation points shows the range of variability within the data.
- When analyzing the following X-mR charts, it shows a high level of variability within the data and a higher than normal range of observation points outside the contol limits. This may indicate the data is not in control and observed process is not operating consistently.
- When considering the final averages in task times, these outliers can be neglected in order to get more accurate numbers. Suggestions for further data collection include finding and eliminating causes of observed times outside of the control limits in order to obtain greater accuracy.

## (6) Pre Data Expired Supplies

- Question 2: Are all reconstituted drugs properly dated, timed, and stored, and have all discontinued, expired or deteriorated drugs and/or IV fluids been removed and returned to Pharmacy?

## Improve

## (1) FTE Labor Analysis

## Inventory and Order Responsiblity

## (1) FTE Labor Analysis

Stocking Responsiblity

11\%

## (1) FTE Labor Analysis

## - Labor saving estimates by task if we move from high pay mixed responsibility model time to single responsibility Receiving Clerk model.

|  |  |  |
| :---: | :---: | :---: |
|  |  |  |
|  | 2, 22 hours 7 cocurenee week |  |
|  |  |  |
| Confidential | Confidential | Confidential |
|  |  |  |
| \$9,226 Sxivigs with $100 \%$ Receeiving Cleek | \$10,311 Savings with 10\%\% Reeevings clerk | \$4,217 savings with 10\%\% Reeeeving cleek |

\$23,754 Yearly Labor Savings With No Process Change

## (1) FTE Labor Analysis

## Receiving Clerk(Purchasing Tech) responsibility vs. mixed responsibility

## Advantages

- Lower overall cost vs. mixed model at $\$ 23,754$ a year savings
- Group ownership of the process
- Standard process for ordering, inventory, and stocking supplies across hospital units
- Less overall chance of error

## Disadvantages

- Slightly higher pay at confidential over PCA at

Confidential

- Less product knowledge
- Less profound knowledge on census

## (2) Future State Process Diagram

- Develop one best method for ordering

## 6 Process <br> Step

Reduction!

## 1 Best <br> Method!

## Kanban System

- Kanban (pronounced "Kahn-Bahn") is a Japanese term for signal.
- Is it used to manage inventory and reduce the chance of running out of supplies.
- It also creates FIFO (First In, First Out) for inventory to help prevent expired supplies.

## Kanban System Types ROI

## 1. Traditional Kanban

2. Electronic Kanban (E-Kanban) with Stock Box System
3. Electronic Kanban (E-Kanban) with OptiFlex System

## First Year ROI

Improve
Implemen
Contro

## First Year ROI Conclusion

## Traditional Kanban

- $\mathrm{ROI}=189$
- By implementing a two-bin kanban system, ETCH is able to realize significant savings due to reduction in its inventorying and ordering costs. Given the relatively cheap implementation cost, this method results in a high ROI that appears to be the best option.

## Stockbox

- $\mathrm{ROI}=5$
- While the stockbox ekanban manages to eliminate costs associated with ordering and most of inventorying, it's ROI is quite low due to the high cost ( $\sim 16,000$ ea) of purchasing the physical stockboxes for each area. Therefore, it is more practical to use the traditional kanban system.

## Opti-Flex

- ROI = 11
- Should ETCH decide to track patient NonChargeables with the Optiflex system, all inventorying and ordering costs would essentially be eliminated due to the automatic per-useage item tracking. While this option provides the best labor savings, it's ROI is still lower than that of the traditional kanban due to the infrastructure expenditures that would be needed on floors that do not currently have the optiflex hardware.

## Annual Year ROI

|  |  | Traditional Kanban | Notes | Stockbox <br> (e-kanban) | Notes | Opti-Flex <br> (barcode) | Notes |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Predicted Annual Savings from Inventorying | \$ | $10$ | Assuming it takes a receiving clerk 3 mins to pick up kanban cards. | $\$$ | Assuming it takes the same time to retreive ekanban cards as traditional kanban cards | $\$$ | Opti-flex continuously tracks per item/"bundle" useage therefore eliminating inventorying cost |
| Predicted Annual Savings from Ordering | \$ |  | Assuming it takes a receiving clerk 12 mins to order new supplies |  | Automatic ordering eliminates all ordering costs. Savings taken directly from PP labor analysis |  | Opti-flex can be set up to automatically re-order therefore eliminating order costs. |
| Predicted Annual Savings from Stocking | \$ | $0$ | Assuming it takes a receiving clerk 28 minutes to re-stock supplies | $\$$ | Stocking time shouldn't change | $\$$ | Stocking Time shouldn't change. |
| Total Annual Savings (Labor) | \$ | 42,908 | Same as First Year | \$ 52,493 | Same as First Year | \$ 54,890 | Same as First Year |
| Estimated Annual Cost | \$ | 100 | Simple two-bin maintenance supplies (tape, foamboard, etc.) | \$ 24,660 | Assuming \$2,055 annual software \& licensing costs for 12 units. | \$ 17,855 | Assuming \$2,232 annual software \& database maintenance costs for the whole hospital. |
| $\begin{gathered} \mathrm{ROI}=\text { (Total } \\ \text { Savings/Total Cost) } \end{gathered}$ |  | 4 | 3 |  | 2 |  | 3 |
| ROI Time |  | 1 | days | 175 | days | 121 | days |

## Annual ROI Conclusion

- $\mathrm{ROI}=429$
- After the initial implementation of the traditional two-bin kanban system, there are essentially no additional future costs associated with this method except for simple maintenance \& replacement of aging kanban cards/dividers/bins. This method again appears to be the best option based on annual ROI.

- $\mathrm{ROI}=2$
- While the stockbox ekanban manages to eliminate costs associated with ordering and most of inventorying, it's ROI is lower than that of the traditional kanban due to the high annual maintenance and licensing costs.

## Opti-Flex

- $\mathrm{ROI}=3$
- Should ETCH decide to track patient NonChargeables with the Optiflex system, all inventorying and ordering costs would be eliminated due to the automatic peruseage item tracking. This ROI calculation does not include any additional savings regarding the efficiency of expired items or useage, which could significantly raise this figure.

## (2-8) Tradition Kanban System

- The Kanban card is used as a signal to order more supplies.
- It tells you what to order, the quantity and where to store the supplies.

## Traditional Kanban Instructions

1) When supplies in a bin hits the reorder point, pull the Kanban card.
A.

Full Bin: Pull from the side that is not covered with foam board

Reorder Point: When one side is empty and you reach the side covered with foam board lower the cover, remove the Kanban card and use the remaining supplies.

## Kanban Instructions

2) Place removed Kanban card in the mailbox mounted on the wall in the Respiratory supply closet.
3) Cards are collected from the mailbox on ordering day.
4) The cards tell the person ordering exactly what to
 order.

## Kanban Instructions

5) Once supplies are received, bins will be refilled to the correct level and the Velcro Kanban card will be reattached to the bin.

## Kanban Pro / Con

## What Makes this Work

- Every single employee using the system.
- It's Easy!

## What Makes this Fail

- Employees not taking ownership.
- Not placing Kanban cards in the mailbox.
- Losing cards
- If you notice a card on the floor find it's home!

## Kanban Inventory Level Calculations

- Average Monthly Usage = Sum of Months / Number of Months
- Six month order report unitized to determine patient demand
- Max Daily Usage = Historical maximum usage of part number in one day period
- Normal Daily Usage = Average Monthly Usage $\div 30$ Days

## Kanban Inventory Level Calculations

- Lead Time = How long it takes to ship part number from supplier
- Inside Procurement = 3 days
- Outside Procurement = 8 days
- Safety Stock = (Max Daily Usage - Normal Daily Usage) x Lead Time
- Reorder Point = (Normal Daily Usage x Lead Time) + Safety Stock
- Par Level = Reorder Point x 2
-     * For Two Bin Kanban System

## Kanban Sample Calculations

| Item Name | Procurement | May | Aug | Sep | Oct | Nov | Dec | Sum <br> Total | Order <br> Count | Max | AVERAGE | $\begin{array}{\|c\|} \hline \text { Max } \\ \text { DU } \\ \hline \end{array}$ | Normal <br> DU | LT | SS | Reorder Point | Par <br> Level |

## (8) Inventory Holding Value Calculations

| Item Name | Part <br> Number | Type | Kanban <br> Par | Current Inv | One <br> Time Overage | $\begin{aligned} & \text { Pkg } \\ & \text { cost } \\ & \hline \end{aligned}$ | Units <br> per pkg | Unit Cost | Overage Cost | Current Value | Future Value | Monthly Savings |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Glove Chemo Plus Small | 13294 | BX | 2 | 23 | 21 | 63.9 | 1 | 63.90 |  | 0 ¢ | กち |  |

- One Time Overage Cost = (Current Inventory Level Kanban Par Level) x Unit Cost
- Current Value = Current Inventory Level x Unit Price
- Future Value = Kanban Par Level x Unit Price
- Monthly Holding Savings = Current Value - Future Value

## Notes on Kanban Calculations

- Validate with staff members and make adjustments as needed.
- Frontline staff have profound knowledge of the work.
- Use this profound knowledge in conjunction with the kanban calculations to reach final agreement on par levels.

## (7) 5S + Safety

- $5 S$ is a foundation for a more systematic organized approach to the workplace
- Method for organizing the workplace to reduce wasted time and motion

## $5 S+$ Safety

SORT: Separating the needed from the notneeded

SET IN ORDER: A place for everything and everything in its place, clean, and ready to use

SHINE: Cleaning for inspection

STANDARDIZE: Developing common methods for consistency

SAFETY: Ensure a safe working environment through inspection, evaluation, and follow-up

SUSTAIN: Holding the gains and improving
$\square$

## 5S Pictures

## Before:

## $5 S$ Pictures

## (3 \& 4) Post Inventory and Ordering Times Chart

X-mR Control Chart

Define

## (5) Post Stocking Times \& Chart

- Current State: Not enough data collected. Purchasing Tech position is recently vacant and Patient Care Assistants have to do this job.
- Outcome: Random Patient Care Assistants where assigned to stock and did not record time for post data.
- Future State: Collect data once Purchasing Tech position is fill. Run t-test to compare pre and post data to determine if there is a statistically significant difference.

## $(3,4,5)$ Test of Hypothesis Flow Chart

*Image Credit: IIE Six Sigma Black Belt Week 1 - Larry Aft

## $(3,4,5)$ Test of Hypothesis

## Step1: Ho: Pre Data = Post Data <br> H1: Pre Data > Post Data

## Two tail test since H 1 is a directional inequality

## Step 2: 95\% Confidence Level

## $(3,4,5)$ Test of Hypothesis

## Step 3: Descriptive Statistics

## $(3,4,5)$ Test of Hypothesis

Step 4: Calculate Test Statistic and Table Value

- Two data collections will be compared using the t-test.
- T-test examines two related data samples to find whether the data and population mean differ.
- Based on the X-mR Chart graph, my hypotheses is that the two samples will be relatively similar to each other.

## $(3,4,5)$ Test of Hypothesis

## Step 4 (cont.): Calculate Test Statistic and Table Value

| t-Test: Two-Sample Assuming Unequal Variances |  |  |
| :--- | ---: | ---: |
|  |  |  |
| Mean | Pre Data | Post Data |
| Variance | 0.014583 | 0.012626263 |
| Observations | $8.62 \mathrm{E}-05$ | $3.20041 \mathrm{E}-05$ |
| Hypothesized Mean Difference | 13 | 11 |
| df | 0 |  |
| $t$ Stat | 20 |  |
| P(T<=t) one-tail | 0.633713 | $=\mathrm{Ho}$ |
| t Critical one-tail | 0.266725 | $=\mathrm{H} 1$ |
| P(T<=t) two-tail | 1.724718 |  |
| $t$ Critical two-tail | 0.533449 |  |

## $(3,4,5)$ Test of Hypothesis

## Step 5: Decision Making

| t-Test: Two-Sample Assuming Unequal Variances |  |  |
| :--- | ---: | ---: |
|  |  |  |
|  | Pre Data | Post Data |
| Mean | 0.014583 | 0.012626263 |
| Variance | $8.62 \mathrm{E}-05$ | $3.20041 \mathrm{E}-05$ |
| Observations | 13 | 11 |
| Hypothesized Mean Difference | 0 |  |
| df | 20 |  |
| t Stat | 0.633713 | $=\mathrm{Ho}$ |
| P(T<=t) one-tail | 0.266725 | $=\mathrm{H} 1$ |
| t Critical one-tail | 1.124710 |  |
| P(T<=t) two-tail | 0.533449 |  |
| t Critical two-tail | 2.085963 |  |

## H1 < Ho , Reject Ho and Accept H1

## Post Data is not significantly lower the Pre Data

## $(3,4,5)$ Test of Hypothesis Interpretation

- The t-test shows there is no significant difference in the pre and post times.
- Reflection on the post data results:
- The process is new and there is a learning curve.
- The Purchasing Tech position is recently vacant and Patient Care Assistants are having to do this job. They are not as efficient and there are different PCAs doing the job as needed instead of a dedicated Purchasing Tech.
- Next Steps:
- Apply the learning curve theory to show what the results could be once there is a dedicated staff member hired.

## $(3,4,5)$ Learning Curve Theory

- As people gain experience in doing a task, the usually can do the task more quickly.
- The learning curve analytical tool is used to estimate the rate at which cumulative experience allows workers to do tasks faster.

$$
\mathrm{T}_{\mathrm{n}}=\mathrm{T}_{1}\left(\mathrm{n}^{\mathrm{b}}\right)
$$

Where:
$\mathrm{T}_{\mathrm{n}}=$ time required to complete the nth task
$r=$ learning rate percentage
$b=\ln (\mathrm{r}) / \ln (2)$

## $(3,4,5)$ Learning Curve Theory

## - $\mathrm{T}_{1}=18$ minutes <br> $r=80 \%$ learning rate

## (8) Inventory Holding Value Totals

## $2^{\text {nd }}$ East

- Sum Overage Cost = \$6,724
- Sum Current Value = \$11,740
- Sum Future Value = \$5,945
- Monthly Savings = \$5,795

## $2^{\text {nd }}$ West

- Sum Overage Cost = \$1,867
- Sum Current Value = \$4,750
- Sum Future Value = \$3,769
- Monthly Savings = \$981

41\% Reduction!

## Implementation Next Steps

1. Expand kanban to remaining units
i. ED \& 3 ${ }^{\text {rd }}$ Floor - July 2014
ii. PICU \& NICU - September 2014
iii. $\quad 2^{\text {nd }}$ Clinic $\& 3^{\text {rd }}$ Clinic - November 2014 iv. IPS \& OPS - January 2015
2. Transfer task responsibility to Receiving Clerk/Purchasing Tech in Materials Management
a. FTE Transfer
3. Budget for e-Kanban Fiscal Year 2015/2016

|  | FLOOR STOCK AND SUPPLIES |  | No |  | Turn around: | 7 days |
| 1 | Are arrangements and neatness satisfactory; Is the designated Injection Prep area free of clutter? | X |  |  |  |  |
| 2 | Are all reconstituted drugs properly dated, timed, and stored, and have all discontinued, expired or deteriorated drugs and/or IV fluids been removed and returned to Pharmacy? | X |  |  |  |  |
| 3 | Is the amount of drugs stocked appropriate? Stock list, approved by Pharmacy and Nursing, with PAR levels and exp dates, is posted. | X |  |  |  |  |
| 4 | Are there any patient's own prescriptions present not Identified by Pharmacy and approved for use? |  | X |  |  |  |
| 5 | Are internal drugs separated from external drugs? | X |  |  |  |  |
| 6 | Are test agents, germicides, disinfectants, and other household substances separated from drugs? | X |  |  |  |  |
| 7 | Is/are the floor stock cabinet(s) properly secured? | X |  |  |  |  |
| 8 | Is/are the medication cart(s) locked if not in use? | X |  |  |  |  |
| 9 | Are all other drugs secured if not in use? | X |  |  |  |  |
| 10 | Are High Alert medications properly tagged and/or separated, and the list posted? | X |  |  |  |  |
| 11 | Are Sound-alike/Look-alike medications separated and tagged, and the list posted? | X |  |  |  |  |
| 12 | Are Central Supply kits present that contain medication in date? | X |  |  |  |  |
| 13 | Are necessary drip charts accompanying Dopamine bags/vials, Dobutamine bags/vials, Nitroglycerine bags, and Epinephrine vials? (Remember NICU has specified Dopamine and Epinephrine charts) | X |  |  |  |  |

## Data Collection Sheets and X-mR Charts

- Collect two weeks of data on time spent ordering, inventory, and stock supplies biannually.
- Document on X-mR chart to validate process control.
- Next Data Collection:
$-7 / 27 / 14$ to $8 / 8 / 14$

## Business Results

- Reduction of the holding value of supplies on $2^{\text {nd }}$ Floor by $\$ 89,903$ annually.
- Projected the labor cost reduction $2^{\text {nd }}$ Floor of $\$ 7,208$ associated with the inventorying, ordering and stocking of theses supplies annually.
- If we see similar results in all nine areas we could see a potential savings of $\$ 873,995$ annually.
- $\$ 809,127$ in Supplies and $\$ 64,868$ in Labor

## Final Impact to the Business

| Metric | Goal | Units | Baseline (2nd Floor) | Project Results (2nd Floor) | Baseline (House-wide) | Project Potentials <br> (House-wide) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1. Time to inventory | 1 minute | Minutes per room | 17 mins | 4 mins. 76\% Reduction | 17 minutes | 3 minutes 82\% Reduction |
| 2. Cost to inventory | Confidential | \$USD per hour | Confidential |  |  |  |
|  |  |  |  | 91\% Reduction |  | 89\% Reduction |
| 3. Time to order supplies | 10\% reduction | Minutes per order | 19 minutes | No Data | 19 minutes | 12 minutes 37\% Reduction |
| 4. Cost to order supplies | Confidential | \$USD per hour | Confidential |  |  |  |
|  |  |  |  | 61\% Reduction (Labor Savings Only) |  | 62\% Reduction |
| 5. Time to stock supplies | 10\% reduction | Minutes per department | 31 minutes | No Data | 31 minutes | 28 minutes 10\% Reduction |
| 6. Cost to stock supplies | Confidential | \$USD per hour | Confidential |  |  |  |
|  |  |  |  | 37\% Reduction (Labor Savings Only) |  | 23\% Reduction |
| 7. Expired Supplies | 50\% reduction | Occurrences of Expired Supplies | 9 Occurrences | 6 Occurrence 33\% Reduction | 33 | 11 Occurrence 33\% Reduction |
| 8. Inventory Level | 25\% reduction | Total value of supplies in nine department annually | \$197,880 | $\$ 107,911$ <br> 41\% Reduction | \$3,254,900 | $\$ 2,445,773$ <br> 25\% Reduction |

## Conclusion

- \$873,995 combined savings in labor, materials, and holding cost.
- Reduction of expired supplies from 2.25 occurrences/month to a 1.5 occurrences/month.
- Develop one best method for ordering which results in six fewer process steps and chances for error.
- Transfer of inventorying, ordering, and stocking responsibility to the right job code to free up nursing time to take ideal care of patients.
