Eliminating e-waste and bridging the **digital divide.**

Every second, hundreds of digital devices are thrown away around the world. Meanwhile billions of people go without the tools they need to realise their dreams in our digital age.

We are changing this, transforming e-waste into opportunities for students and future leaders across regional Australia, Papua New Guinea and the Philippines.

Since 2017, we have repurposed more than 6,000 devices, diverting them away from landfill and into the hands of 102,000 students in need. By 2027, we aim to digitise **a million dreams**, enriching the lives of a million people with digital learning tool and opportunities.

Millions of computers rot in landfill while millions more students go without digital access in a digital world. **We are changing this.**

A quality education can only be a digital education in today's world. However, this is not a reality for students across Australia and the Asia Pacific region who experience digital exclusion through lack of access to digital tools. In Papua New Guinea, only 141 of 3,500 primary schools have a genuine computer lab. **We have built them all.** Throughout Australia, hundreds of thousands of students do not own a laptop.

LiteHaus International is a Queensland-based NGO placing the tools to learn, dream and achieve in the digital age at the fingertips of students across Asia Pacific.

DEVICES **TO DREAMS**

How can you help?

A quality education can only be digital, and you can make this a reality for students in need by donating your end-of-life devices. Since 2017, over 500 businesses, schools, and families have helped us empower future leaders facing digital exclusion.

It's free. It's easy. Your data is securely wiped. Reach out now to discuss how you can be involved.

INTERNATIONAL

Transforming e-waste to **bridge the digital divide.**

What we are **take**

We are looking for:

- **Laptops** – less than eight years old.
- **Chromebooks** – less than five years old.
- **Desktop computers** – less than eight years old – **and other digital peripherals.**

If you are unsure about functionality, do not let that stop you. When equipment is not suitable for our beneficiaries, we ensure it is sustainably recycled.

What we **do**

Technology should be inspiring. For most of our beneficiaries, this will be the first time they have owned or even touched a computer.

We conduct thorough functionality checks, install a new operating system, educational material, e-safety content and then deploy the devices throughout our programs.

Your devices will be used to establish ground-breaking digital classrooms or equip students who do not have digital access at home.

Secure **data** erasure

In a digital world, data is everything. **LiteHaus International** is committed to ensuring that our supporters' data is handled securely and appropriately.

At no cost, we offer secure data erasure to NIST800-88 standards using Blancco software, complete with reporting. We can complete this service remotely and under total supervision from donors, if preferred.

We also accept devices without hard-drives, should donors choose to keep sensitive data. Please, touch base to discuss a solution which works for you.

4,267 computers kept out of landfill and repurposed

141,219 people impacted from 2017 - 2022

49.7 tonnes of e-waste repurposed

144 tonnes of CO2 prevented from release

A quality education can only be digital.

We collect from corporates, schools and families Australia-wide, Port Moresby and Manila.
