

Northern Cardinal - *Cardinalis cardinalis*

Photo credit: commons.wikimedia.com. Female in left photo, male in right photo.

The Northern cardinal is easily distinguishable from other birds by their bright red color and prominent crest, the Northern Cardinal is a territorial songbird often found in gardens as well as around the Garden City Bird Sanctuary. They prefer nesting in shrubs and trees.

Description

Size and Shape- Mid-sized songbird with a short and stout beak, a long tail, and a crested head

Color Pattern- Males are mostly bright red with darker red wings. Females are more grayish tinged with red. Both sexes have a reddish beak and black around the beak

Behavior- Often found foraging on or near the ground near shrubbery. Males are territorial and can be aggressive

Song- Series of high-pitched chirps

Habitat- Live in dense and brushy areas such as edges of woodlands, thickets, swamps, overgrown fields, and gardens

Range- Year-round in northern and central part of the US, parts of southern Canada, Mexico, and around the Gulf of Mexico

Diet- Mostly grains, seeds, and fruits from bird feeders and the ground supplemented with insects such as grasshoppers and cicadas

Bird Statistics
