<b>Massage / Stimulation /Letdown Mode</b>	<p><b>Massage/Stimulation Mode</b> is a setting on your breast pump that mimics the fast, fluttering suckling of a baby to stimulate your milk-flow (letdown). The breast pump will suck and release at more cycles per minute than in expression mode. The vacuum level (strength of suction) does not get as intense as it can in expression mode.</p>		
	5 massage levels + 2-Phase Mode w/ 5 levels	5 massage levels	5 massage levels
<b>Expression / Suction Mode</b>	<p><b>Expression Mode</b> is used once milk starts flowing. The breast pump will have a slower but stronger suction.</p>		
	9 expression levels	12 expression levels	12 expression levels
<b>Suction Level</b>	<p><b>Suction Level</b> is measured in <b>mmHg</b> (millimeters of mercury), which is the standard unit of measuring vacuum pressure.</p>		
	260 mmHg maximum	270 mmHg maximum	270 mmHg maximum
<b>Hospital Strength / Performance</b>	<p><b>Hospital Strength/Performance</b> is a term used by breast pump companies to convey stronger breast pump suction. There are no standards or regulations that define exactly what suction a breast pump needs to be considered "hospital strength." A <b>hospital grade</b> breast pump is a rental multi-user pump with a stronger strength suction featuring a more powerful motor, special wavelength, and programming that allows mothers with certain medical necessities to get the maximum amount of breast milk production possible.</p>		
	Yes	Yes	Yes
<b>System</b>	<p>A <b>Closed System</b> pump has a barrier between your breast milk and the pump. With this barrier, milk is unable to get into the pump, which prevents any kind of contamination between the pump and the milk. An <b>open system</b> pump has no barrier. If milk gets into the tubing, care needs to be taken to clean the tubing and ensure that it is completely dried out before using the pump again.</p>		
	Closed	Closed	Closed
<b>Flange/Shield/Cup/ Insert Size Included with Pump</b>	<p>The <b>Flange/Shield/Cup/Insert</b> is the plastic or silicone part that is placed on the breast in order for breast milk to be expressed. The right size flange should allow the milk to flow well and should be comfortable while using the pump at medium to maximum suction level.</p>
