

**LibreOffice** - a great alternative to the Microsoft Office subscription treadmill -  
Presented by: Liz Ackerman

Tired of those annual subscription fees for the privilege of using Microsoft Office products? And if you are like the majority of MS Office retired users, you likely don't use MS Office as much as you may have previously, but like to have available a good word processor or spreadsheet application or even a presentation package to feature photographs!

LibreOffice makes a great FREE alternative choice to MS Office for many reasons, including but not limited to:

- **FREE**, no monthly, annual subscription fees
- **NOT cloud based**, installed directly on your computer
- **no user ID required** to use it (MS Office wants you to have a Microsoft ID - they WILL collect data about you)
- you choose whether or not to update - **no forced updates** while you sleep
- **supports all MS Office native file types**, and many others, so the transition between programs is seamless
- **versions of LibreOffice for ALL operating systems**, including Android and Mac
- the VP Tech club has LibreOffice installed in the computer lab!

Stay tuned and join us at later dates for more tech information sessions!  
Download a copy of LibreOffice from here:
