

UNIVERSITY of MARY

Hamm School of Engineering

Students in the Hamm School of Engineering will be well prepared for all aspects of their career. Our mission is to graduate highly competent professionals who carry a Benedictine moral compass and a spirit of servant leadership – meaning they'll learn the advanced knowledge they need in their chosen field, gain skills in communication and collaboration, and practice ethical leadership rooted in Benedictine values.

Our state-of-the-art facility – opened in 2020 and created with input from more than 35 top-level engineering companies – features a machine shop, student design center, a design fundamentals lab, and multiple lab spaces dedicated to each major. Our focus on undergraduate education means that they'll have full access to those facilities (no getting booted by grad students!) and to our dedicated faculty, whose priority is teaching.

Plus, our small class sizes and hands-on approach to learning translates to student success: Mary engineering students have high job and internship placement rates.

Donors who have given significantly to the facility or scholarships for the School of Engineering:

Dan & Heather Butler
Gen. David & Connie Sprynczynatyk
Greg Butler

The University of Mary's *Vision 2030 Strategic Plan* is founded on the themes of *Distinction, Service, and Relationships*. These are central elements to our mission, embodied in our innovative School of Engineering.

We are honored by a rich network of relationships with generous benefactors—individuals, families, and corporate partners—who have a heart for service. They join the University of Mary in our belief that this state-of-the-art facility is essential to the education of professional engineers who are culturally prepared for the workplace, leaders in the service of truth.

We are thankful for all of our donors. With deep gratitude, we acknowledge those whose substantial gifts have brought our vision of the University of Mary's School of Engineering to reality.

That in all things God may be glorified.
