

## FEATURES

## COMPETITION

<b>BEAM TECHNOLOGY</b>	RMC utilizes exclusive rights to utilize patented beam technology that allows for stretches of over 70 feet to be accomplished on our clear view cages.	Industry standard beam has a max span capability of 30 feet before creep/flex begins in the shape of the beam.
<b>PAINT</b>	All structural materials are coated with American Architectural Manufacturers Association AAMA 2604 certified paint, which has 500% the weather resistance to standard polyester paint.	High production polyester paint used for standard materials fades within 3-5 years.
<b>SCREEN</b>	RMC incorporates a Polyester screen that not only resists fading, mildew and sun damage for 10 years plus, but also has 3x the strength of traditional fiberglass screen.	Normal fiberglass screen becomes brittle after 2 to 3 years. Within 5 to 7 years, a strong gust of wind can tear fiberglass screen to shreds.
<b>FASTENERS &amp; ANCHORS</b>	All enclosures built by RMC come standard with coated fasteners and anchors, which resist corrosion, rust, and other degradation from the elements 20x longer than traditional materials.	Standard fasteners and anchors typically rust or corrode in the first 2-3 years of installation, which in return can cause loose connections creating critical failure of your structure.
<b>AVAILABILITY</b>	We have immediate availability and directly communicate with you to schedule each step of the process ensure timely and honest delivery.	Most companies collect deposits and choose which jobs suit them best to build first, based on profit and ease of install. This unfortunately is an industry standard RMC is here to change.
<b>PRICING</b>	At RMC we pride ourselves on our honest, and transparency. For that reason, we have put our pricing on our website, ensuring you know exactly what you're paying for and are never overcharged.	Pricing varies from \$13-\$17/ft and often times contractors use subpar materials that can result in a variety of issues down the road.
