**SemaConnect™**

Network

Charge EVs more, worry less, and collect data more efficiently

Take charge of your building's sustainability.

The SemaConnect Station is a smart and sophisticated electric vehicle charging station that is wirelessly networked. This is vital, especially for commercial applications, so that you can effectively manage and report on your stations.

The Network. It's what makes the Station smart.

Instant Updates & Notifications · **Secure Log-in** · **Charging Status** · **Credit Card Enabled**

Smart Card Authentication · **Charging Station Locator** · **Smart Phone Application** · **Toll-Free Customer Support** · **Online Bill Pay** · **Sustainability Reports**

Owning and managing your SemaConnect Station couldn't get any easier with the addition of the SemaConnect Network.

The SemaConnect Network software allows EV drivers and Station owners to make driving and managing charging sessions easier to track.

The best part?

It comes bundled with the Station, so you're getting two products for the price of one.

Now that's something to be green with envy about.

Station Owner

The SemaConnect Network for Station owners and operators allows you to easily manage, monitor and update your charging stations. By logging in to our cloud-based software with your secure username and password the system makes it simple, convenient and effortless to use from anywhere.

Through the Station Manager application, station owners have the ability to register users, monitor costs, set pricing, track system usage and even print out environmental reports.

Electric Vehicle (EV) Driver

The SemaConnect Network for electric vehicle drivers allows drivers to easily register, manage, monitor and update their charging sessions at your stations. The cloud-based software makes it simple, convenient and effortless for EV drivers to use whether they are on a computer, tablet or smart phone.

The Driver Manager software also has mapping tools for identifying station locations, availability and pricing. Text-based messaging makes it easy to immediately communicate important information such as charging-fault detection, current state-of-charge and charging-complete.
