iVend Handheld for Android

**iVendRetail**

iVend Handheld automates retail's hardest tasks with a mobile inventory solution designed to improve efficiency and visibility into stock across the enterprise

android

Benefits

- Store employees can update inventory faster, with minimal errors

- Decision makers gain visibility into real time updates to stock status

- More accurate stock counting and reports

- Efficiently perform cycle counts with real time barcode scanning

- Check stock from anywhere in the store

- Easily manage product SKUs

- Centrally manage pricing across all sales channels and customer groups

- Improve transaction accuracy with real time data validation

- Reduce customer wait times by instantly looking up availability and pricing data from anywhere in the store

- Increase store associate mobility and convenience with a modern look and feel

- Heighten productivity through better employee utilisation

Inventory control is the backbone of successful retail, especially for large enterprises managing a wide variety of SKUs. Without proper controls, stores may run out of stock or be burdened with slow moving product, and the overall omnichannel experience can be lackluster for customers wanting real time information and fast service.

While traditional inventory management typically requires long hours and can result in costly errors, a mobile solution for inventory control improves data accuracy, better utilises the retail workforce, and improves the overall customer experience by displaying up to date inventory and pricing information wherever it is most needed.

iVend Handheld for Android has been designed to be intuitive and extremely efficient. The Android application enables users to enter transactions and perform inventory requests pertaining to goods and stocks in real time. Transaction validation takes place online ensuring accurate data is maintained for all users.

Store Order Picking

- Pick list(s) for Special Orders

- Pick list(s) by Customer, by

- Fulfillment Type

- Near real time status update of picking – marked for picking, picked, etc.

- Options for partial picking, cancellation of pick list
