Services

Echocardiogram

Clinical Findings

First Available Appointment ✓

Case History

Presented for screening for cardiac disease after recently arriving from Russia. No unusual coughing, sneezing, vomiting or diarrhea. No polyuria/polydipsia. Appetite and activity level normal.

Current Medications/Doses

None

Lab Tests

None

Physical Exam

Physical Examination

Heart Rate	212
Resp. Rate	44
Heart Rhythm	Regular
Pulse Quality	Normal
Mucous Membranes	Pink, Moist
CRT	
Jugular Distension	None
Jugular Pulsation	None
Resp. Character	Normal

Cardiac Auscultation

A grade 2/6 left parasternal systolic murmur was noted.

Thoracic Auscultation

Within normal limits in all regions.

Echocardiogram Exam

Echocardiogram

IVSd	4.2 mm	Normal: 3 - 5.5
LVIDd	16.3 mm	Normal: 10.8 - 21.4
PWd	4.7 mm	Normal: 2.5 - 5.5
LVIDs	6.9 mm	Normal: 4 - 11.2
FS%	58 %	Normal: 35 - 67
Ao	9.7 mm	
LA	10.4 mm	
LA:Ao	1.07	

Echo Findings

Image quality was good. The left ventricular wall thickness measurements were normal. Systolic function was normal. No valvular abnormalities were noted. The left atrial diameter was normal.

Doppler Measurements

LVOT	1.41
RVOT	1.30

Doppler Findings

Color Doppler examination showed no abnormal blood flow.

Pulsed wave Doppler analysis showed normal ventricular outflow tract velocities and wave form. Mitral valve inflow analysis showed E:A wave summation.

Assessment

Diagnosis

Structurally normal heart with a physiologic murmur.

Discharge Instructions

Thank you for bringing Taisiya in to see us today. She was a great patient for us!

The echocardiogram done today showed no evidence of structural heart disease.

Taisiya's murmur is what is called a physiologic, or innocent, murmur. This means that there is no structural heart disease and the murmur is due to turbulence caused by the heart working vigorously. This can be due to stress, other underlying disease, or can be normal in an athletic animal. In cats about 30% of murmurs end up being physiologic in origin. In this case it is most likely due to the stress of being at the veterinarian's office.

Recommendations

Medication

No cardiac therapy is needed at this time.

Recheck Appointments

This is a finding that does not require any follow up unless the murmur changes in character or other signs of heart disease are seen in the future.

Anesthesia Recommendations

There is no cardiac contraindication to anesthesia or fluid therapy at this time.

Thank you for entrusting me with Taisiya Star Ark's care!

Trey Schutrumpf, DVM, DACVIM (Cardiology)
