

Proact Engineering

Proact Engineering prides itself on its quality and service. Supporting several multi-million pound customers with their supply chain, Proact is not only very competitive but also highly reliable.

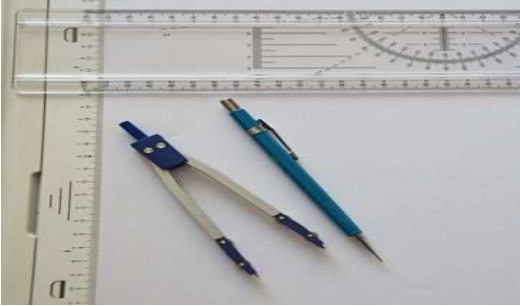

Proact Engineering already produce a wide variety of components for a range of industry sectors; Automotive, White Goods, Construction, Horticulture & Metal treatments. You can be assured your product is in safe hands with Proact.

The Proact team with decades of combined engineering experience are committed to the highest standards of service and product manufacturing, send us your quote or contact us for our testimonials.

In-house Tool Design

Excellent Tool design is the essential first step to producing accurate, quality components in the most efficient way. Let Proact Engineering deal with this process and ensure they are optimally designed for Proact to deliver.

Progressive tooling designs allow us to cut out additional operations and keep costs down.

In-house Tool Manufacture & Repair

Tooling Manufacture and repairs are all carried out under the same roof by our tooling partner DW Tools. Having these resources gives us superb efficiency and minimal downtime.

Whilst the majority of customers buy the tooling upfront; talk to us about the possibility of amortising the cost over a number of components or over time.

High Quality Component Manufacture

All of our components are produced to our high, exacting standards. We carry stock on many customers' product lines to ensure complete supply continuity,...

Significant product lines have been won due to the superb quality of our parts, our customers have stayed due to our service and the quality.

Proact Engineering can manufacture a huge range of components, in high volumes or even occasional smaller batch runs. Our quality and service are exceptional, as we fully manage a variety of available 3rd Party finishing processes, from plating, anodising chemical blackening and heat treatment.

If you don't see below a similar component to your requirement, this is only a tiny proportion of our capabilities and we will happily look at more complex components even those requiring fabrication.

Proact Engineering take the Quality of its Customers' components very seriously and operate a very rigorous system to ensure that we don't disappoint. We're rightly proud of our Quality Performance and have a downloadable copy of our BS EN ISO 9001:2015 Certification on our website <https://proacteng.com/quality>.

Proud to be a Great British Manufacturer.
