What are Dental Implants?

Dental implants are titanium anchors that serve to replace missing roots and support artificial replacement teeth. These implant restorations look and feel like natural teeth!

Why Get Implant Restorations?

Implant restorations are an excellent alternative to removable dentures or fixed bridges. They offer a natural solution to restore function and provide soft-tissue facial support. Dental implants allow you to naturally eat, speak and smile for life!

How do Implants Work?

Your dentist will surgically install the titanium implant into your jawbone beneath the gums. Once the tissue has healed and the metal anchor has integrated with the bone and gums, the implant parts will be assembled and the replacement tooth attached.

Benefits and Advantages:

Restore your confidence with a permanent natural looking Smile!

- *A healthier, happier, natural smile*
- *Increased confidence and self esteem*
- *Improved speech and eating*
- *Provides a permanent long-term solution*
- *Preserves facial structure and support*
