What are Dentures?

Dentures or “False Teeth” are prosthetic appliances that replace natural teeth and gums. For patients that have lost any or all of their teeth, be it through an accident, disease, or poor oral hygiene; dentures restore lip support, speech, eating, and esthetics.

Why Dentures?

Losing your teeth can make simple everyday tasks like eating or talking, a lot more difficult. Dentures replace those missing teeth and also support cheeks and lips to prevent facial muscles from sagging. A new smile improves quality of life by adding confidence in the way you look and feel.

Types of Dentures

PARTIAL DENTURES

Used to replace individual teeth or groups of missing teeth and tissues. Partials are retained by attaching to the remaining teeth.

FULL DENTURES

A complete set of artificial teeth and gums which act as replacements for all upper and or lower teeth. Held in place with a suction fit.

OVERDENTURES

Typically Overdentures are attached to dental implants in the upper or lower jaw. The implants allow the false teeth to remain secure for stability, and function.

Benefits:

- *Increased Confidence – A bright new smile adds confidence and boosts self-esteem.*
- *Easier Eating – A full set of teeth helps with chewing and means one can enjoy many more fabulous foods.*
- *Improved Speech – Pronunciation of sounds and words improves with a complete set of teeth.*
