What are Veneers?

Veneers are thin hand-made ceramic facings that are cemented onto facial surface of natural teeth. Generally used to enhance discolored, damaged or crooked teeth; these veneers are strong and durable, and perfectly crafted to enhance the beauty of your smile.

Why Get Veneers?

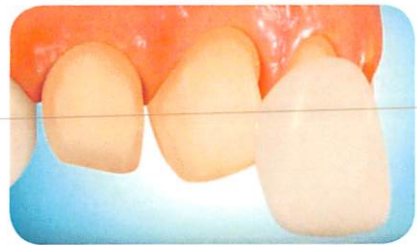

If you suffer from stained, misaligned, or chipped teeth, you are likely a good candidate for cosmetic Smile Design Veneers. Bring back your confidence with a more esthetic and bright smile!

How do Veneers Work?

Your dentist will consult with you to design a perfect new bright smile!

1. A small amount of enamel will be removed from the front and sides of your teeth to make room for the veneers.
2. Your dentist will make molds of your teeth, and choose a shade and shape that will best enhance your beautiful new smile.
3. The dental laboratory will custom-craft ceramic veneers to fit your teeth and bite.
4. Once completed, your dentist will permanently cement the veneers to your existing teeth.

Benefits and Advantages:

Restore your natural healthy smile with strong and durable veneers!

- *Correct the alignment of crooked and rotated teeth*
- *Remove the look of cracks, stains, and discoloration*
- *Repair chipped and damaged teeth*
- *Improve self-esteem and confidence with a beautiful new smile*
