About BruxZir Crowns

BruxZir Zirconia restorations are esthetic and unbreakable! Biocompatible and metal-free, these crowns and bridges are ideal for patients that have broken their natural teeth or porcelain restorations through bruxing and grinding.

Why Choose BruxZir?

These new high-strength Zirconia restorations are an excellent alternative to the traditional Metal and Porcelain.

Gold Crown

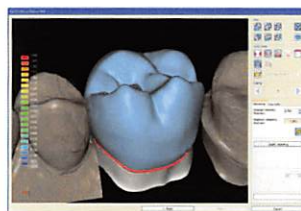

Porcelain and
Metal Crown

How Are They Made?

BruxZir crowns are manufactured from medical-grade zirconia oxide using new CAD/CAM technologies. These digitally designed restorations are shaped with computerized milling machines, then sintered for strength and glazed to a smooth surface.

Laboratory Finishing

Benefits and Advantages:

Choose BruxZir for high-strength metal-free restorations!

- *Translucency and color similar to natural teeth*
- *Bio-compatible Zirconia Oxide material*
- *Wear characteristics similar to natural teeth*
- *CAD/CAM manufacturing for precision fit*
- *Virtually unbreakable high strength zirconia*
