

Activa

E.S.O. evolution

Activa 30

E.S.O. evolution

Activa represents a new generation of highest Filtration single motor upright vacuum cleaner.

This is a uniquely designed world class vacuum/dry carpet cleaning machine and electric broom all in one.

Comparative dimensions of the most common household contaminants.

ELECTRIC BROOM AND POWER SWEEPER FOR HARD FLOOR

The 4 wheels and the special patented shoe plate with squeegee, make the Activa a true sweeper able to remove the dust even if deep inside the ceramic grooves, thanks to the strong action of the brush roll at 5000 rpm in combination with the suction.

FELT SHOE PLATE

Thanks to the patented felt shoe plate, Activa conveniently vacuums and polishes floors like: wood and marble at the same time.

ON BOARD TOOLS

Activa is a powerful vacuum for above the floor cleaning. All the tools are installed on the back of the bag housing, so they are easy accessible.

HEALTHCARE FILTRATION

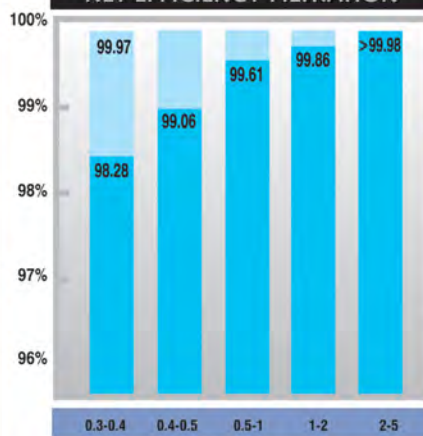

The standard Activa is equipped with 6 stages of filters, at the final stage, an electrostatic microfilter (3M Filtrete), ensures more than 98% at 0.3 micron of filtration efficiency. Thanks to this system, dust, pollen, dust mites and other contaminants responsible for allergies and asthma are effectively trapped.

SPECIAL FILTERS

The Activa can be equipped with a special S-Class Hepa Filter (standard on the Platinum) for healthcare environments, which assures 99.97% filtration efficiency at 0.3 micron for extreme allergy concerns. To eliminate offensive odors such as smoke, kitchen and pet odors etc., use the special (optional) Carbon Active filter.

NET EFFICIENCY FILTRATION

Tests with Microfilter and Carbon active Filter

Test with Hepa Filter

The filtration efficiency tests done on the Activa by the independent laboratory IBR (U.S.A.), show the result of its advanced technology.

The lightest of its class and at the same time strong and reliable; Activa has two geared belts protected by a patented clutch system and an electronic overload control.

Extremely versatile, the Activa has all the tools incorporated into the back housing of the machine; it lies flat, which provides a very low profile for easy cleaning under furniture.

It has interchangeable filtration options, hospital grade 3M Filtrete (standard), optional carbon/active charcoal filter (to eliminate odors) or S-Class Hepa filtration.

You can count on the lowest possible sound levels from the Activa, thanks to the superior engineering of all the components and dynamic balancing of all moving parts.

Converting the vacuum into a dry carpet cleaning system is as simple as installing a special conveyor. No tools are required!

For your convenience Lindhaus also offers many environmental safe carpet and upholstery cleaners.

UPRIGHT VACUUM CLEANER

The lightest and quietest of its class, Activa is equipped with four wheels to smoothly follow the desired direction. The height adjustment will give you the perfect setting for any carpet. The lowest possible barycentre allows the above the floor cleaning preventing the risk of falling off. Its sleek low profile design, allows the machine to lie flat for easy access under furniture.

MATTRESS

Due to the 4 wheels and brush height adjustment, you can feel confident using the Activa to vacuum your mattress to remove dust, hair and dust mites, giving all your family a peaceful sleep.

BRUSH CHANGE

Nothing could be easier. No tools are required to change the brush roll or to clean the base housing.

DRY CLEANING SYSTEM

Activa is innovative and unique. Its patented built in Dry Cleaning System is the perfect solution for cleaning carpets and rugs with no risk and minimal effort.

1. Replace the "Channel cover" with the "RED conveyor"

2. Sprinkle the Lindhaus Dry Cleaning Compound.

3. Use the Activa to scrub in the compound. Allow it to penetrate into the fibers.

4. Vacuum the carpet to remove the compound. Your carpet is now fresh and clean.
