

Multi-Site Helicopter Drilling Investigation - 22 Sites - 220 Boreholes

Project Profile

22 wellsites were abandoned and required OGC CoR Part 1 & 2's.

Issue

The remote nature of the oil and gas field made it cost prohibitive to open up access to the field and the 22 individual well sites.

Solution

Using helicopter portable drilling equipment, a multi-site heli-drill program was conducted to complete site inspections and Stage 2 PSI drilling programs (a total of 220 boreholes drilled) to fulfill requirements for successful OGC Part 1 and Part 2 COR applications.

Outcome

By completing the drilling for the sites as one continuous program and using a helicopter portable drill rig instead of opening up winter access, SynergyAspen saved the client over \$150,000 in total project costs.
