

The Original Board Blanket

GooderthanGold.com

- Protects your wax from gouges
- Protects your edges from dings
- Protects your car's interior from scrapes, cuts, and melting muddy ice
- Protects your car's paint job while you gear up
- Likely fits any snowboard [135-170cm]
- Machine washable [Warm, low heat dry]

The actual Original Board Blanket
Yoga mat, duct tape, Velcro & staples

Top closure & Buckle

Close these two last. First the velcro closure to hold the O.B.B. in place while you tighten the buckle, ensuring that an even amount of board blanket is protecting each edge.

Center closure & Buckle

Tighten, re-tighten, repeat
The most common problem reported in testing was the OBB twisting around the board during transit. That problem was 100% fixed by re-tightening the velcro on the center closure. Ideally, equal amounts of board blanket protect each edge.

Slide Buckle

\$1.3273 less expensive than the snap buckle when you include labor. Try to get equal amounts of board blanket on each edge before closing.

Elastic Cinch

No need to crank this all that tightly, the buckle will do the work.

Handmade, in my basement, in ever decreasing states of sobriety.

...on a hand-me-down sewing machine, after a full day of work, late at night when the rest of the house has gone to thier seperate corners ("up-hill, both ways, in the snow, carrying my brothers and sisters on my back"). Meaning that a certain level of "uniqueness" is to be expected in each OBB we sell. The O.B.B. was born of necessity, created by a snowboarding dad in a family of skiers, who was tired of spending a whole Saturday pre-season getting the family's gear ready, only to have thier gear beat the hell out of his in the back of the car while up the mountain. I am a self taught sewer and this design continues to evolve.

The Original Board Blanket was born from a yoga mat and duct tape. It evolved when Matt's favorite orange ski bib's ripped up the leg during one truly spectacular, *Agony of Defeat* level wipe-out, but ideation and prototyping, like product life, are a cycle. and those bibs died that O.B.B. might live.

Out of respect for those safety orange marvels, should something go wrong with your O.B.B., consider it an opportunity to expand your skillset; you really should be able to mend your own clothes. While you are at it, learn to change your own fluids and rotate your own tires, be able to make at least one quality meal from memory that you can serve to impress a date, and call your mother; it's been too long since she heard from you. Also, figure out where the main water shut-off is in your home (even if you rent), you'll be glad you did when you need it. Most importantly, please chew with your damn mouth closed; it's disgusting!

...Of course, if the problem is functional (i.e. broken buckle, or a seam that was forgotten) or so aesthetically glaring that it bothers you everytime you see it and this is "literally Killing you" please send an email about it to originalboardblanket@gmail.com. Include pictures, we'll do what we can to make you happy except cover return shipping.

The Original Board Blanket

Video assembly instructions:
gooderthangold.com/original-board-blanket

Find a good flat work surface. Lay a towel down for protection.

- 1) Open your OBB. There are two parts. The sewn closed end (w/label) is the bottom part and should go beneath the end that should have arrived velcroed closed; that is the top part.
- 2) Lay out the top and bottom parts so that the ends roughly line up with the ends of your board [Interior (checkerboard) up].
- 3) Reverse the ends of the top and bottom parts and engage the velcro that holds them together. You do not need to get this perfect right now, you'll be tightening later
- 4) Slide the tail of your board into the bottom pocket. The belt should already be threaded though the slide buckle, if not, do that now. Tighten.
- 5) Close the open top end of the OBB over the nose of your board. The buckles should have arrived snapped closed. Open them and thread the belt through the open end of the male buckle (the female buckle is sewn in. Close the top buckle and tighten.
- 6) Flip your board on its side and re-set the velcro as needed until your Original Board Blanket stays closed but isn't straining the closures.
- 7) Flip it back and buckle the center.

There are few problems you will experience using your OBB that can not be fixed by tightening up the velcro closures and/or tightening the straps before transport.
