Intervention Fidelity Checklist

Step	Trial 1	Trial 2	Trial 3	Trial 4	Trial 5
1.					
2.					
3.					
4.					
5.					
Daily Fidelity Percentage Percentage of steps completed accurately.	_____ %	_____ %	_____ %	_____ %	_____ %

This form is to be used to document the level of intervention implementation fidelity for an intervention. By breaking down the intervention into steps you can more accurately and sensitively measure the fidelity of implementation. Rather than simply reporting the intervention was or was not implemented accurately as an all or nothing response, each component can be recorded to facilitate intervention implementation troubleshooting.

You can choose to do fidelity checks multiple times per day or daily. It is best to check fidelity more than once during intervention implementation. The current form allows for 5 checks. You certainly can adapt the form to fit your needs (e.g., more or fewer steps may be required).
