

Residue Release

Ultimate Residue Management and Nutrient Release

Residue Release by Streamline Ag is specifically designed to break down crop residue in the field, improving planter performance, creating stronger stands, and releasing valuable nutrients to feed the crop.

The patent-pending formulation of Residue Release is powered by the MICROBILIZE™ Microbe Technology Delivery System. This system provides the ideal carrier to ensure that microbes stay alive in the jug and have the optimum conditions to begin multiplying and breaking down residue.

RECOMMENDED CROPS

Apply Residue Release to any crop residue

FEATURES & BENEFITS

- **Less labor**
- **Less fuel**
- **Less compaction**
- **Less skips**
- **More value** from nutrients tied up in crop residue
- **Improved soil health**
- **Fast emergence, stronger stands and healthier plants**
- **Season-long stress mitigation**

DIRECTIONS FOR USE

Fall Applications - Apply immediately after harvest for best performance.

Spring Applications - Apply with early pre-emergence herbicides. Ideal for terminating cover crops.

Summer Applications - Ideal for breaking down wheat stubble.

Labeled for ground, aerial and chemigation

Use Rate: Apply 12.8 oz per acre with 10 gal of water. Highly compatible tank mix partner with most herbicide and fertility programs.

Packaging:

- 2x2.5 gallon jugs
- 250-gallon totes

ACTIVE INGREDIENTS

Guaranteed Analysis

Alkyl Polyglucoside (surfactant)..... 35.00%
Organic acids (pH buffer)5.00%
Rheology and dispersant agents.....2.00%

Bacillus licheniformis.....3.9 x 10⁵ CFU/Gm
Bacillus coagulans.....3.9 x 10⁵ CFU/Gm
Bacillus subtilis.....3.9 x 10⁵ CFU/Gm
Bacillus pumilus3.9 x 10⁵ CFU/Gm
Bacillus megaterium.....3.9 x 10⁵ CFU/Gm
Bacillus amyloliquefaciens..3.9 x 10⁵ CFU/Gm

In the final liquid form, contains 700 billion total colony forming units (CFU's) per gallon (7 x 10¹¹ CFU/gal) of the above soil health microbes (1gm = 1 ml).

The consortium of microbes included in Residue Release are specifically designed to digest crop residue and cycle nutrients back to the soil profile. Additionally, these microbes build improved soil tilth, reduce disease pressure, and generate overall increased biological activity.

Breaking down residue faster will allow faster planting, stronger stands and fewer skips
