

Post-Installation

Carpet Care Guide

Congrats on your recent carpet installation, below are some care guide topics to follow in order to maintain the integrity of your new floor.

Care to take on a regular basis:

- Vacuum heavy traffic areas twice per week
 - Be sure to review maintenance instructions for vacuum cleaners that are approved for use on your specific floor type.
- Combat crushing by placing glides under heavy furniture.
- Rotate furniture to give carpet a rest.
- Close blinds or shades to avoid long hours of direct sunlight.

Almost all Carpet warranties will require that you have a professional steam cleaning/hot water extraction at least once every 12-18 months.

If an accident occurs...

- Clean spills promptly.
- If you cannot clean immediately, you can remove most stains after 24 hours.
 - Flush the stain using mild dishwashing detergent and water. Blot excess moisture with a clean white cloth, moving from outer edge of stain toward the middle.

What not to do:

- Do not use any household cleaners that are not listed within the approved cleaner in your care and maintenance instructions.
- Do not use any cleaning methods that are not mentioned within the manufacturer label in order to maintain your manufacturer warranty.
