Monitoring Nuts:

1. Place fiber glass poles on a 45 degree angle. It would be beneficial to flag each stake to identify easily. On first stake write monitor # that's provided by the lab
2. Soil samples are collected between trees 10" deep with the 1st inch discarded
3. Collect 25+ leaves & petioles from most recently fully expanded leaves
4. Wash with tap water and place in a paper bag that's labeled with your monitor #
5. View results at www.westernlaboratories.com under the Results/Tutorials tab with the username & password given to you by the lab
