

# Giant Granadilla Passionfruit

*Passiflora quadrangularis*

Fast growing vine which can grow over 50ft in a single season. The stems are quadrangular in shape. The giant granadilla is hardy to the mid 30's when mature.

Loves the warm humid tropics, but will not stand flooding. Protect from freezing temperatures. Fruit forms best after self-pollination. Giant green to yellow passion fruit can reach over 1' in diameter. Pulp may not be as flavorful as common passion fruit, but it's still tasty and often used in drinks. As you can see from the picture, a good support structure is helpful!
