Street Light Spacing

Metal pole street lights are typically installed approximately 200' apart (+/- 10' for driveway and property line adjustment) for adequate roadway illumination purposes. Street lights are typically installed between property lines and away from obstruction such as trees, manhole, and inlets.

Spacing for installing street lights on wooden utility poles may vary depending on the existing location of the wood poles. However, spacing will normally be 150' to 200' apart for adequate roadway illumination.
