

## ST ANDREW'S METHODIST CHURCH PRE-SCHOOL

# Managing children who are Sick, Infectious, or with Allergies Policy

# **Policy statement**

We aim to provide care for healthy children through preventing cross infection of viruses and bacterial infections and promote health through identifying allergies and preventing contact with the allergenic trigger.

#### Procedures for children who are sick or infectious

- If children appear unwell during the session for example, if they have a temperature, sickness, diarrhoea
  or pains, particularly in the head or stomach parents are called and asked to collect the child, or to send
  a known carer to collect the child on their behalf.
- If a child has a temperature, they are kept cool, by removing top clothing and sponging their heads with cool water whilst keeping away from draughts.
- The child's temperature is taken using a thermometer, kept in the first aid box.
- In extreme cases of emergency, an ambulance is called and the parent informed.
- Admittance can be refused to children who have a temperature, sickness and diarrhoea or a contagious infection or disease.
- Where children have been prescribed antibiotics for an infectious illness or complaint, we ask parents to keep them at home for 48 hours before returning to the setting.
- After diarrhoea and/or sickness, we ask parents keep children home for 48 hours following the last episode.
- Some activities, such as sand and water play, and self-serve snacks where there is a risk of crosscontamination may be suspended for the duration of any outbreak.
- We have a list of excludable diseases and current exclusion times. The full list is obtainable from <a href="https://www.gov.uk/government/publications/health-protection-in-schools-and-other-childcare-facilities">www.gov.uk/government/publications/health-protection-in-schools-and-other-childcare-facilities</a> and includes common childhood illnesses such as measles.

### Reporting of 'notifiable diseases'

- If a child or adult is diagnosed as suffering from a notifiable disease under the Health Protection (Notification) Regulations 2010, the GP will report this to Public Health England.
- When we become aware, or are formally informed of the notifiable disease, our manager informs Ofsted and contacts Public Health England, and acts on any advice given.

#### HIV/AIDS/Hepatitis procedure

HIV, like other viruses such as Hepatitis A, B and C, are spread through body fluids. Hygiene precautions for dealing with body fluids are the same for all children and adults. We:

- Wear single-use gloves and aprons when changing children's nappies, pants and clothing that are soiled with blood, urine, faeces or vomit.
- Bag soiled clothing for parents to take home for cleaning.
- Clear spills of blood, urine, faeces or vomit using mild disinfectant solution and mops; any cloths used are wrapped and disposed of safely.
- Clean any tables and other furniture, furnishings or toys affected by blood, urine, faeces or vomit using a disinfectant.
- Ensure that children do not share toothbrushes. Toothbrushes are thoroughly cleaned each day.

#### Nits and head lice

- Nits and head lice are not an excludable condition; although in exceptional cases we may ask a parent to keep the child away until the infestation has cleared.
- On identifying cases of head lice, we inform all parents ask them to treat their child and all the family if they
  are found to have head lice.

#### Procedures for children with allergies

- When children start at the setting we ask their parents if their child suffers from any known allergies. This is recorded on the Registration Form.
- If a child has an allergy, we complete a Health Care Plan and risk assessment to detail the following:
  - The allergen (i.e the substance, material or living creature the child is allergic to such as nuts, eggs, bee stings, cats etc).
  - The nature of the allergic reactions (e.g. anaphylactic shock reaction, including rash, reddening of skin, swelling, breathing problems etc).
  - What to do in case of allergic reactions, any medication used and how it is to be used (e.g. Epipen).
  - Control measures such as how the child can be prevented from contact with the allergen.
  - Review measures.
- This risk assessment form is kept in the child's personal file and a copy is displayed where our staff can see it.
- A health care plan will also be completed.
- Generally, no nuts or nut products are used within the setting.
- Parents are made aware of this policy so that no nut or nut products are accidentally brought in, for example to a party.
- It is not possible to guarantee that no trace allergens will be included in foodstuffs used in the setting.

#### Insurance requirements for children with allergies and disabilities

- If necessary, our insurance will include children with any disability or allergy, but certain procedures must be strictly adhered to as set out below. For children suffering life-threatening conditions, or requiring invasive treatments; written confirmation from our insurance provider must be obtained to extend the insurance.
- At all times we ensure that the administration of medication is compliant with the Safeguarding and Welfare Requirements of the Early Years Foundation Stage.
- Oral medication:
  - Oral medications must be prescribed by a GP or have manufacturer's instructions clearly written on them.
  - We must be provided with clear written instructions on how to administer such medication.
  - We adhere to all risk assessment procedures for the correct storage and administration of the medication.
  - We must have the parents or guardian's prior written consent. This consent must be kept on file. It is not necessary to forward copy documents to our insurance provider.
- Life-saving medication and invasive treatments:

These include adrenaline injections (Epipens) for anaphylactic shock reactions (caused by allergies to nuts, eggs etc) or invasive treatments such as rectal administration of Diazepam (for epilepsy).

- We must have:
  - a letter from the child's GP/consultant stating the child's condition and what medication if any is to be administered;
  - written consent from the parent or guardian allowing [our staff/me] to administer medication; and
  - proof of staff training in the administration of such medication eg by the child's GP, a district nurse, children's nurse specialist or a community paediatric nurse.

- Treatments, such as inhalers or Epipens are immediately accessible in an emergency.
- Key personnel for special needs children requiring assistance with tubes to help them with everyday living e.g. breathing apparatus, to take nourishment, colostomy bags etc.:
  - Prior written consent must be obtained from the child's parent or guardian to give treatment and/or medication prescribed by the child's GP.
  - The key personnel must have the relevant medical training/experience, which may include receiving appropriate instructions from parents or guardians.

This policy was adopted by	St Andrew's Preschool  23 <sup>rd</sup> November 2022  31 October 2023		(name of provider)
