

Alpine/Viejas Fire Safe Council's goals are to provide homeowners with the highest level of education, engineer a defensible space plan parcel by parcel through Firewise Adaptive approach. Collaborate with local stakeholders in a regional approach to create and maintain fuel breaks and hazardous fuels reduction. Clear and identify hazardous fuels along evacuation routes.

Empower Homeowners Associations to advocate for local level defensible space works to be conducted. Identify, create and maintain fuels break work that will help in shelter in place, reduce forward rate of spread to those homes adjacent to green belts. Educate homeowners on proper landscape, remove certain species of plants and reduce potential for structure losses.

**FIREWISE
USA**

- Distribute outreach and public education

Distribute to homeowners the most recent fire life safety information at the lowest level. Each parcel with an improved structure shall maintain the required defensible space to buildings at all times. Adaptive resiliency through increasing stronger defensible space, smarter planned landscaping, reducing density of natural fuels. Providing local homeowners the highest level of education.

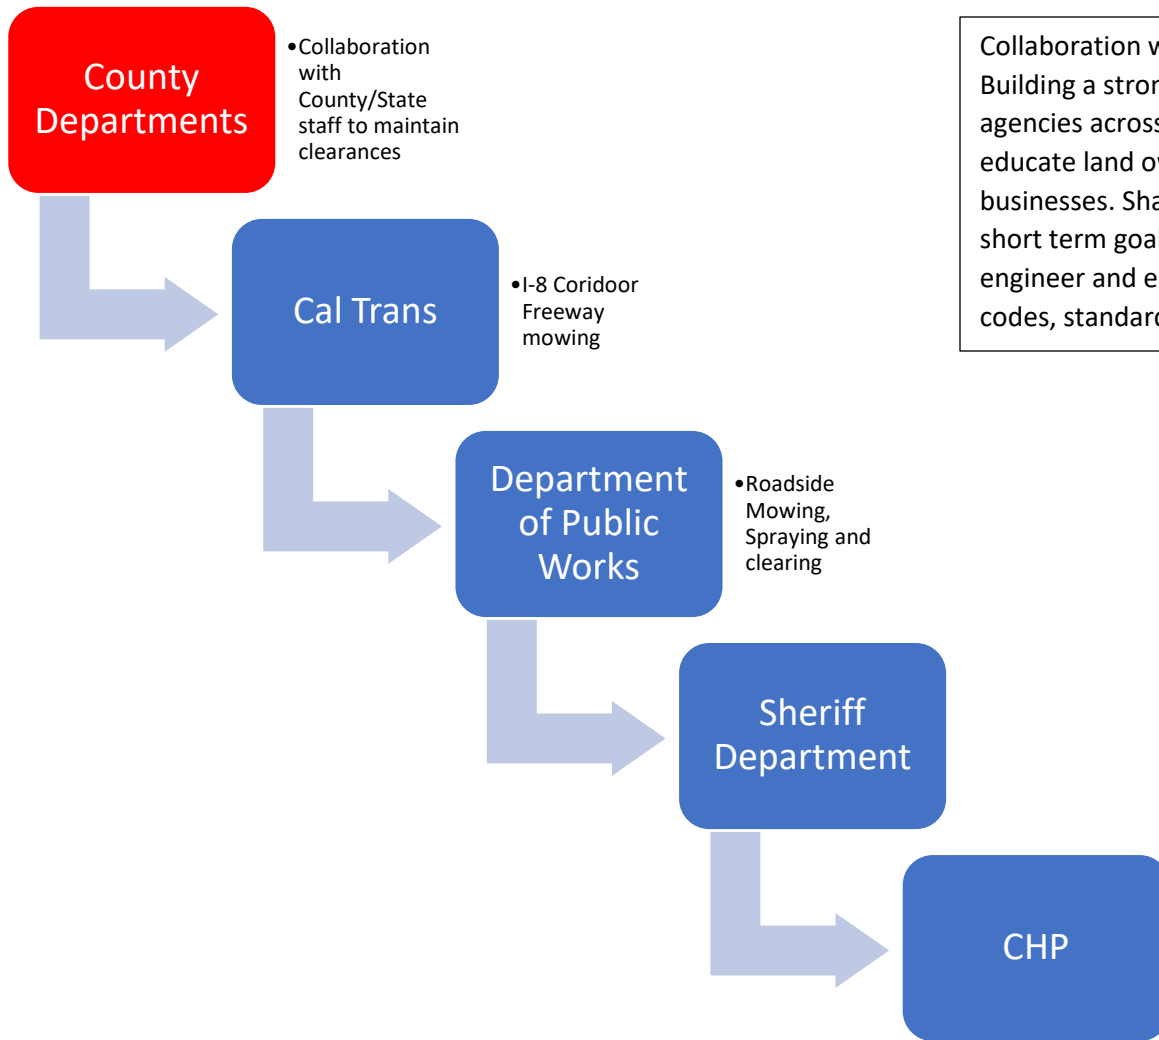

**Empowering
homeowners**

- Parcel by Parcel

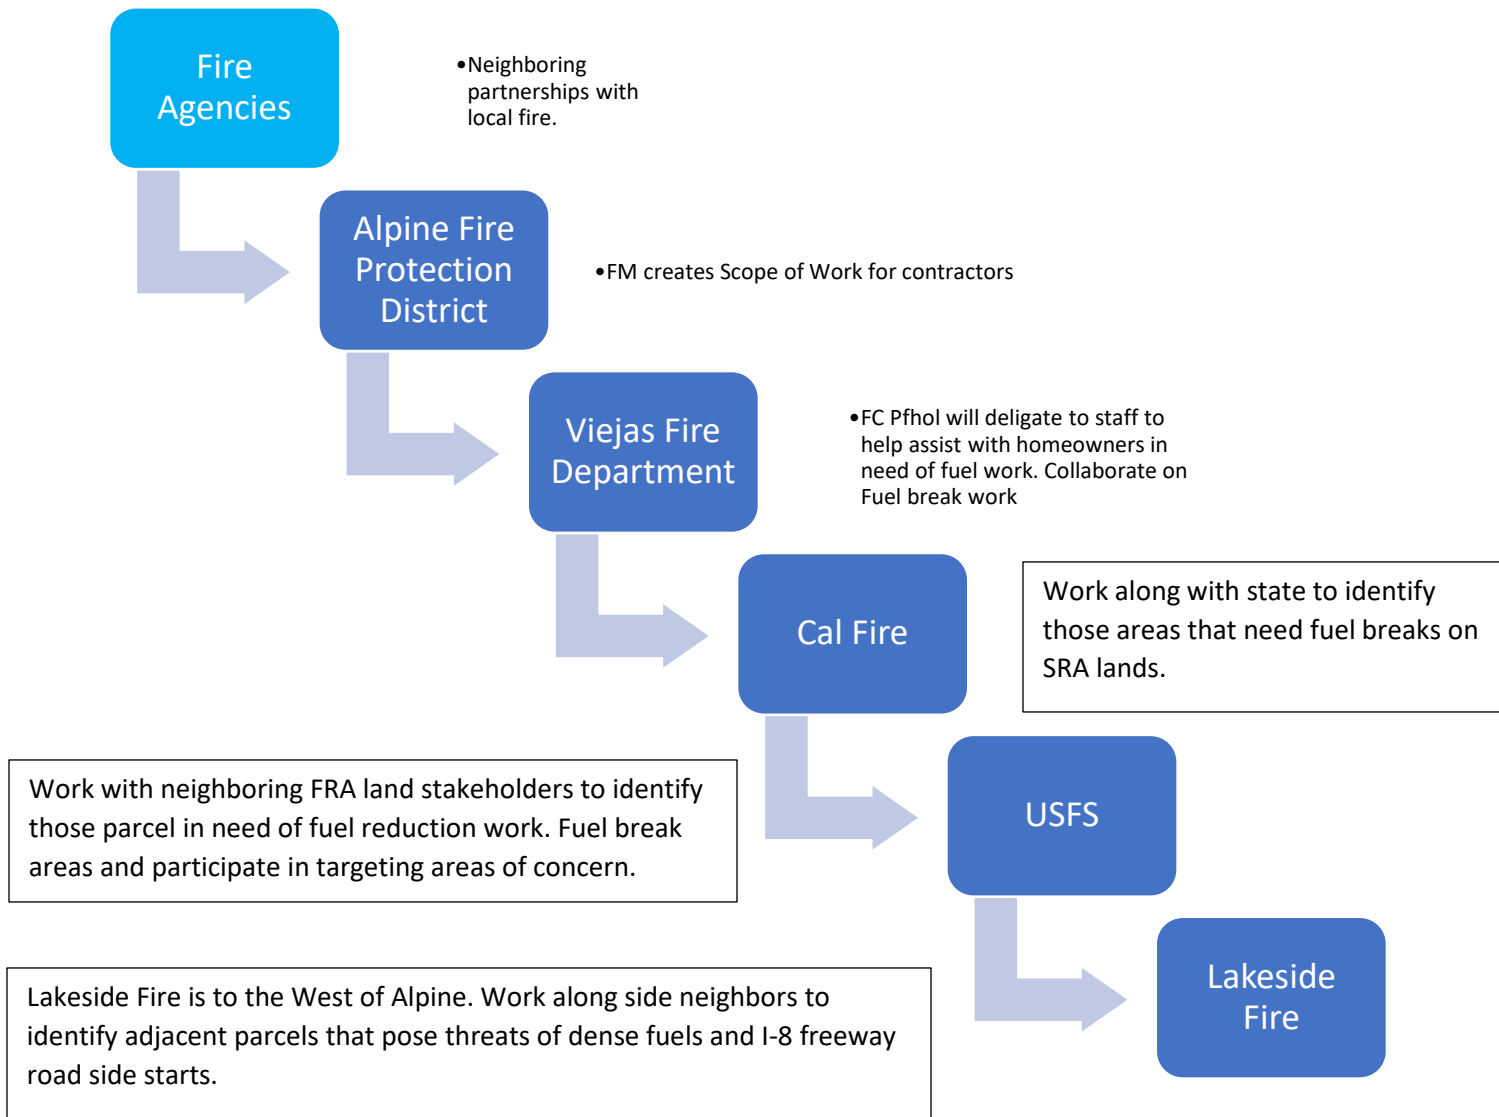

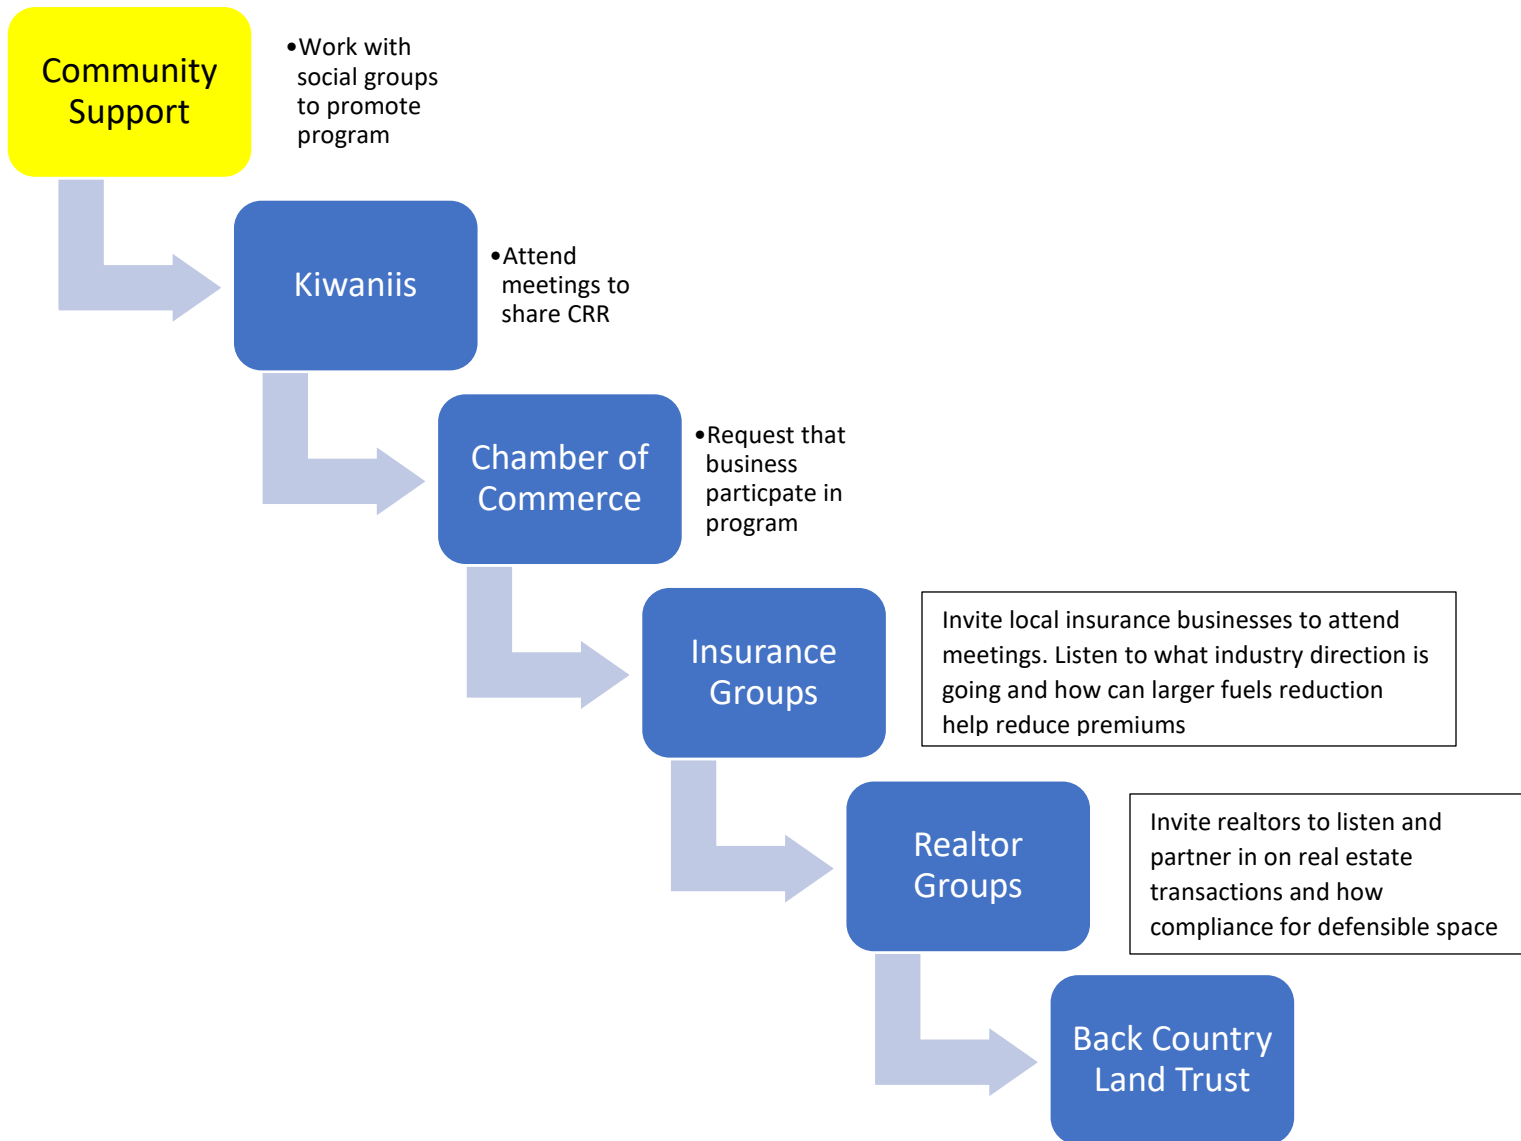

**Create
Establishing
Dspace Zones**

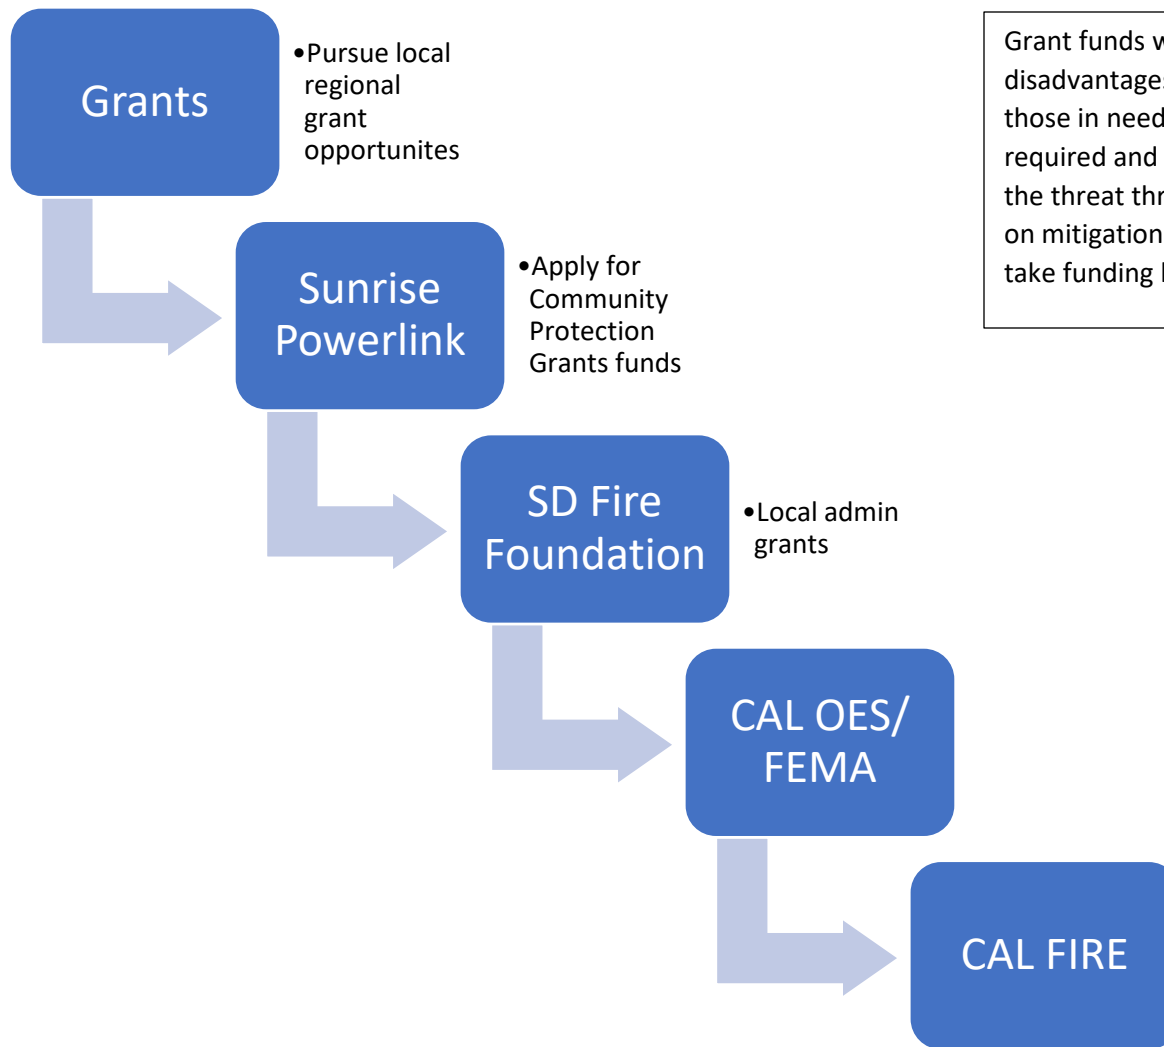

- Zone 0

Collaboration with local neighboring agencies. Building a stronger community will take all fire agencies across state and federal lands to educate land owners, private residents and local businesses. Sharing ideas and partnering on short term goals and long term goals to educate engineer and enforce most recent adopted codes, standards and practices.

Grant funds will help those in need of financial disadvantages. Local fire agencies will have to identify those in need, grade on how much assistance will be required and evaluate the immediate threat. Reduce the threat through goals and implementation strategies on mitigation practices to lower overall risk. This will take funding long term to have an effective outcome.
