

Cloud Business

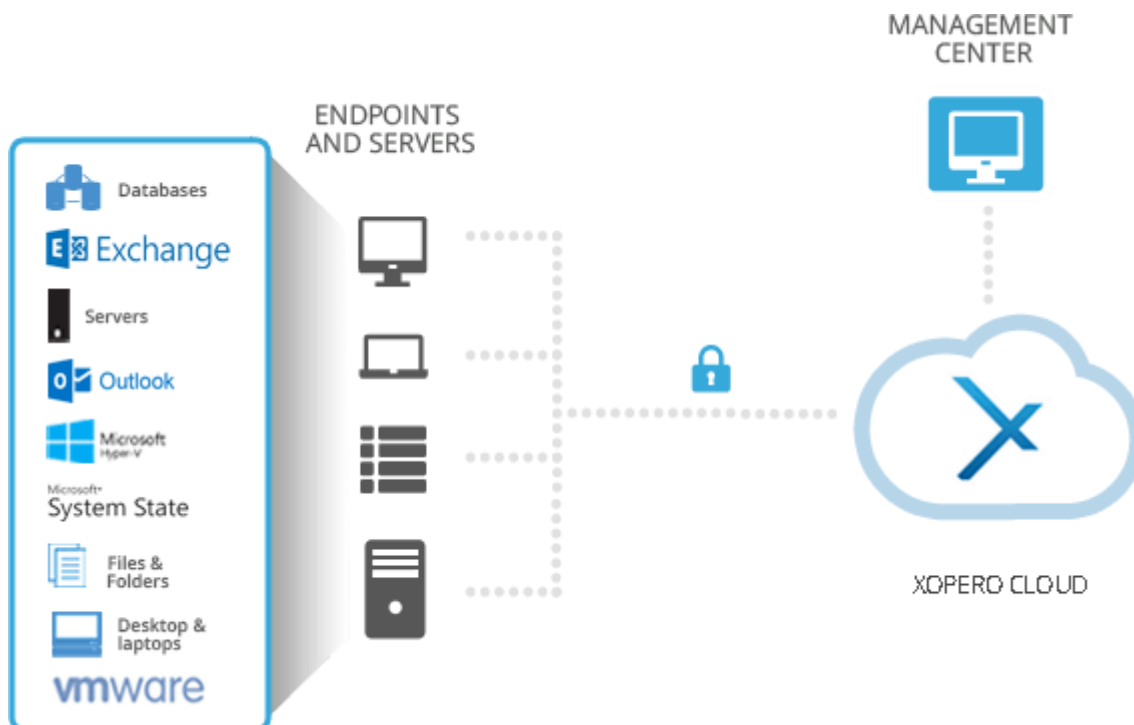

An advanced online backup

I.T.S Cloud allows the protection of unlimited computers, mobile devices, databases and physical and virtual environments.

Reliable backup to the cloud

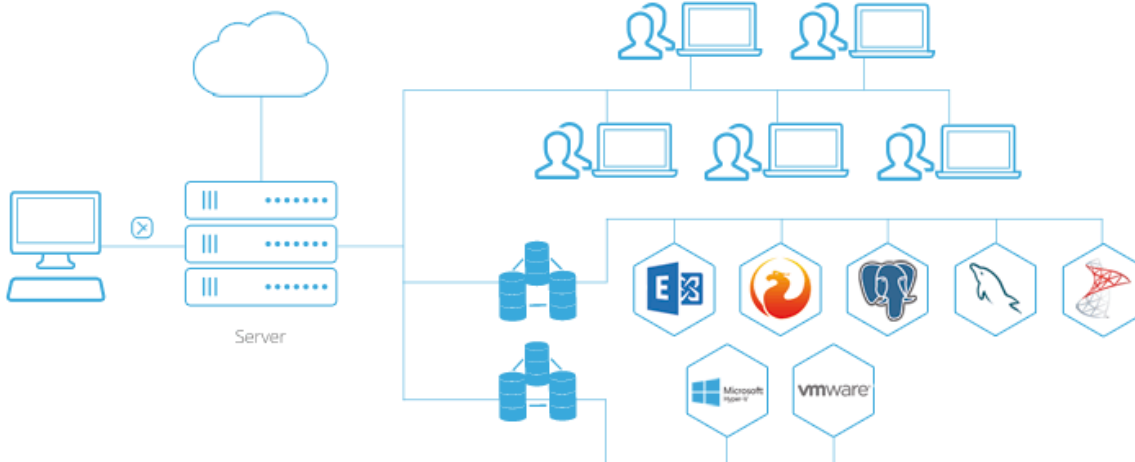

Once installed it becomes a complete solution for protecting critical files, allowing you to completely manage your backup processes and monitor and validate their accuracy. Back up multiple devices – servers, endpoints, mobiles and virtual systems.

- ✓ Simple, fast and seamless data migration
- ✓ Central management that lets you control all backup tasks
- ✓ AES 256 encryption guarantees no one can access your data without permission
- ✓ Advanced, secure data synchronization
- ✓ Long-term data storage and archiving using twin locations

Backup & Restore

Hybrid backup

Maximum security for your data. I.T.S lets you back up your data locally and – for extra protection - send copies to the cloud.

Simple management

You can manage your backups, monitor their accuracy and make all necessary account configurations in one place – remotely if you wish.

Disaster recovery

I.T.S provides comprehensive protection for your entire business environment. Disaster recovery planning has never been so easy.

- ✓ Fast installation and deployment process
- ✓ Simple management that is intuitive and easy to use
- ✓ Protect unlimited endpoints, servers and virtual machines.
- ✓ Save money using your existing infrastructure
- ✓ Implements secure AES encryption and SSL transmission to protect your data

QNAP Appliance

Designed for QNAP devices

I.T.S QNAP Appliance is a dedicated centrally-managed backup solution for your QNAP network drives.

Your private backup hub

Once installed on a QNAP device, it becomes a complete solution for protecting your critical files, allowing you to build a safe backup environment in your company.

Comprehensive management

Remotely manage backups, monitor their accuracy and configure all the accounts and applications installed on your workstations and servers.

- ✓ Easy to configure and use – install and run the solution within a few minutes
- ✓ All-in-one system combines safe data storage, automatic backup and central management
- ✓ Ensure instant recovery of your company's critical data
- ✓ Backup and restore files, folders, endpoints and servers
- ✓ Also covers databases, mail accounts, network locations and virtual environments
