

Piercing Aftercare

- Do not touch fresh piercing.

- With clean hands, clean piercing two (2) times a day with either STERIWASH (Sterile Saline) AFTERCARE SPRAY or 1/4 tsp of non-iodized sea salt to one cup of water.

- Make sure to use warm water to remove any dry skin that has attached itself to the jewelry – breaking the crusties restarts the healing process.

- Stay away from swimming and/or hot tubs.

- Piercings typically take 4-6 months to fully heal.

- Jewelry can be changed after ONE month as long as there have been no issues with inflammation or the healing process. (Every piercing takes a different time to heal, we STRONGLY recommend waiting until the piercing is FULLY healed.)
