

We discovered TNN Australia products at AgQuip 2016 when we saw a sign that said, 'No Bloat'. As we were currently losing quite a few animals to bloat, we were intrigued. After talking with the rep Peter Doyle about the product TNN Mighty-Min, we purchased a 20lt drum to trial in our 400 head breeding cow operation. At approximately \$1 per head to treat a 500kg cow, we decided it was too cheap not to try. Within 10 days of using the product we stopped feeding out hay, our stock losses ceased, and milk production increased. We have continued using Mighty-Min and are still seeing great results.

In 2019 we reduced our operation to a smaller block, in 2020 we started using FCMP Granular Fertiliser at 65kg/ha and our rep suggested using a new product, a liquid fertiliser - Fabulous 335. We treated a 20ha Barley crop and a 20ha Wheat crop (refer to pictures with drum, taken 8 days apart), we saw amazing growth rate and colour in dull and waterlogged crops. With no in crop chemical sprays, both crops yielded over 5.5t/ha with minimal to no frost damage. At \$20/ha per application we saw massive benefits from Fabulous 335. Our 2021 cropping program will see trials using FCMP at 100kg/ha and Fabulous 335 will be used intensively this year.

The two photos above were taken 8 days apart. The first one taken at the time of application of Fabulous 335 at a rate of 2 litres per Ha and the second photo 8 days after the spray application. (Photos courtesy Paula Purvis)

Applying TNN Australia's FABULOUS 335 at night

The Stems from Ken and Paula's crop compared to a stem from a neighbour's crop.
