- CHAP

Check scope of services (check all that apply)

- DMEPOS equipment and/or supplies
 - Oxygen Transfilling:
 - Liquid to gaseous
 - Gaseous to gaseous
 - Liquid to liquid

DMEPOS Distinctions: Distinctions must be achieved in combination with Accreditation.

- CHAP Accreditation Only-** Clinical Respiratory Home Care Services- focuses on care by licensed Respiratory Care Practitioners (RCPs) or other qualified healthcare professionals for patients with acute or chronic respiratory conditions that can be monitored and managed outside a hospital environment. Emphasis is on a collaborative, team-based approach to assessment and ongoing treatment, disease management, and education. The goal is better clinical outcomes that reduce hospital readmissions, support activities of daily living, and enhance quality of life for the patient. Accountability is established through documentation of outcome-based measures, with the subsequent expectation of improving consistency of care and quality of life. This must be achieved in combination with DMEPOS Accreditation.
- ACHC Accreditation Only-** Distinction in Clinical Respiratory Patient Management (CRPM) focuses on care by licensed Respiratory Care Practitioners (RCPs) or other qualified healthcare professionals for patients with acute or chronic respiratory conditions that can be monitored and managed outside a hospital environment. Emphasis is on a collaborative, team-based approach to assessment and ongoing treatment, disease management, and education. The goal is better clinical outcomes that reduce hospital readmissions, support activities of daily living, and enhance quality of life for the patient. Accountability is established through documentation of outcome-based measures, with the subsequent expectation of improving consistency of care and quality of life. This distinction must be achieved in combination with ACHC Home/Durable Medical Equipment (HME) Accreditation.
- ACHC Accreditation Only-** Distinction in Custom Mobility (CM) recognizes providers of custom mobility products who are committed to improving activities of daily living and health-related quality of life for clients/patients. Standards address the unique needs of clients/patients and focus on plans of care, goal and outcome monitoring, client/patient follow-up, and making product adjustments or replacements as needed to proactively reduce or prevent complications and maintain or improve mobility and daily life. Emphasis is on improved service and responsive care to clients/patients with conditions requiring mobility support, including 24/7 access to support. The goal is to sustain client/patient activities of daily living and overall quality of life through ongoing assessment of needs, proactive goal setting, and documentation. This distinction must be achieved in combination with ACHC Complex Rehabilitation and Assistive Technology Supplier (RTS) Accreditation.

ORTHOTIC / PROSTHETIC / FITTER SERVICES: DEFINITIONS

Custom-Fabricated: A custom-fabricated item is individually made for a specific patient. No other patient can use this item. A custom-fabricated device is made on clinically derived and rectified castings, tracings, measurements, and/or other body part images, such as X-rays. Fabricating may involve calculations, templates, and components. This process uses basic materials including, but not limited to, plastic, metal, leather, or cloth in the form of uncut or unshaped sheets, bars, or other basic forms, and involves substantial work such as vacuum forming, cutting, bending, molding, sewing, drilling, and finishing before a patient fitting.

Custom-Fitted: Custom-fitted orthotics are prefabricated devices. The DMEPOS organization or a manufacturer may supply them as a kit that requires assembly. They all require fitting and adjustment (for example, an individual with modifying expertise must trim it, bend it, mold it [with or without heat], or otherwise modify it for a specific patient). A patient's custom-fitted orthotic requires item modification for an individualized fit. Modifications must involve altering the item beyond simple adjustments made by bending, trimming, and/or item molding, installing add-on components, or item assembly.

Custom-Molded Shoes:

- Are constructed over a positive model of the patient's foot;
- Are made from leather or other suitable, equal quality material;
- Have removable inserts that the Organization staff can alter or replace as the patient's condition warrants; and
- Have some form of shoe closure.

Depth Shoes:

- Have a full length, heel-to-toe filler that when removed, gives a minimum of 3/16 inch of additional depth to accommodate custom-molded or customized inserts;
- Are made from leather or other suitable, equal quality material;
- Have some form of shoe closure; and
- Are available in full and half sizes with a minimum of three widths so the sole is graded to the size and width of the upper portions of the shoes according to the American standard last sizing schedule (the U.S. numerical shoe sizing system) or its equivalent.

External Breast Prostheses: Prefabricated or custom-fabricated forms, bras, and sleeves.

Facial Prostheses: Custom-fabricated prosthetic face restoration including auricular, nasal, mid-facial, orbital (including ocular), upper facial, hemifacial, partial facial, nasal septal, and other face areas disfigured by traumatic injury, disease, and/or ablative surgery, or congenital malformation.

Inserts: Are total contact, multiple density, removable inlays; directly molded to the patient's foot or a model of the patient's foot or directly carved from a patient-specific, rectified model; and are made of a suitable material for the patient's condition.

Minimal Self-Adjustment: 42 CFR § 414.402 defines minimal self-adjustment as an adjustment the patient, caretaker for the patient, or DMEPOS organization can perform without needing certified orthotist services (that is, an individual certified by the American Board for Certification in Orthotics and Prosthetics, Inc., or by the Board for Orthotics/Prosthetist Certification) or an individual with specialized training.

CUSTOMER INFORMATION SHEETS

Molded-to-Patient-Model - is defined as:

- Creating a specific body part impression (for example, a foam box impression, a plaster, or fiberglass cast) directly on the patient and using it to make a positive model of the body part when crafting the final product;
- Computer-Aided Design–Computer-Aided Manufacturing (CAD-CAM) systems software creates a digital image of the patient’s body part. This technology includes specialized probes, digitizers, and scanners that create a computerized positive model that uses direct milling equipment to carve a positive model. The DMEPOS Organization fabricates and molds the device individually over the positive patient model;
- For therapeutic shoe inserts for diabetics, a digitally created patient’s body part using CAD-CAM systems software. This technology includes specialized probes/digitizers and scanners that create a computerized positive model, and then direct milling equipment to carve a patient-specific insert.

Ocular Prostheses: Custom-fabricated ocular prostheses that replace the globe of the eye or cover the existing eye resulting from traumatic injury, disease, and/or ablative surgery, or congenital malformation. Custom-made eye prostheses include conformers, scleral shells, and ocular prostheses that fit within the natural socket tissue and eyelids, and the custom-made ocular prosthesis component integrated into an orbital, upper facial, or hemifacial prosthesis.

Off-The-Shelf (OTS): prefabricated orthotics items need minimal self-adjustment for appropriate use and need no expertise in trimming, bending, molding, assembling, or customizing to fit the individual.

Orthotic Devices: rigid and semi-rigid devices used for supporting a weak or deformed body member or restricting or eliminating motion in a diseased or injured body part.

Positive Patient Model:

- Is a negative impression taken of the patient’s body member and used to make a positive model rectification;
- CAD-CAM system uses digitizers to send surface contour data the practitioner uses to rectify or modify the model on the computer screen. The data showing the modified shape goes to a commercial milling machine that carves the rectified model;
- The patient serves as the positive model in a direct formed model. The device is constructed over the patient’s model, and then fabricated to the patient. The DMEPOS Organization checks the completed custom fabrication and makes all necessary adjustments;
- For diabetic therapeutic shoe inserts, a CAD-CAM system uses a digitizer to send surface contour data the practitioner uses to rectify or modify the model on the computer screen. The data showing the rectified model goes to a commercial milling machine that carves the patient-specific insert.

Prosthetic Devices: replace all or part of an internal body organ (including contiguous tissue) or replace all or part of the permanently inoperative or malfunctioning internal body organ’s function, except dental. Medicare does not need a determination of no possibility the patient’s condition may improve in the future. The device passes the performance test when the attending physician’s or prescriber’s opinion and patient’s medical condition are long and of indefinite duration.

Somatic Prostheses: Custom-fabricated somatic prostheses replace areas of the human body not included under definitions of facial and ocular prosthetics but need visual and functional integration. Somatic prosthetics typically include finger, thumb, partial hand, hand, and toe disfigured by traumatic injury, disease, and/or ablative surgery, or congenital malformation.

Specialized Training: Individuals specially trained to give custom fitting services to patients with a medical need for orthotics, include: a physician, a treating practitioner (a physician assistant, nurse practitioner, or clinical nurse specialist), an occupational therapist, or physical therapist who complies with all applicable Federal and State licensure and regulatory requirements.

Therapeutic Shoes and Inserts: Include depth or custom-molded shoes along with inserts for individuals with diabetes.
