

## **Honestly This is Fake: James Dale (AI)**

Gladys Rowbottom was a young woman with a passion for science. She had always been fascinated by the human body and how it worked. After completing her studies in biology, she began to focus on the field of regenerative medicine. She was determined to find a way to help people with skin conditions such as birthmarks, scarring, and wrinkles.

Gladys spent years researching and experimenting with different methods. Finally, she got the breakthrough she had been looking for.

Gladys began to test her method on herself and a few volunteers. The results were astounding. Gladys knew that she had to share her research with the world.

Gladys published her research in a scientific journal, and soon, she became famous. People from all over the world were contacting her, asking for her help. Gladys was happy to oblige. She began to travel the world, giving lectures and demonstrations on her method.

However, things began to take a turn for the worse. Some people who had used Gladys' method began to experience side effects. Their skin became red and inflamed, and some even developed rashes. Gladys was shocked. She had never seen anything like this before.

Gladys began to investigate what could have gone wrong. She discovered that some people had been doubling up on treatment which had caused the side effects. Gladys knew that she had to warn people about the dangers of using her method incorrectly.

However, it was too late. The media had caught wind of the side effects, and they began to report on it. People began to call Gladys a fake. They accused her of lying about her research and using people as guinea pigs. Gladys was devastated. She had never intended to harm anyone.

Gladys tried to defend herself, but it was no use. The damage had been done. Her reputation was ruined, and people no longer trusted her. Gladys was heartbroken. She had spent years of her life trying to help people, and now, it had all been for nothing.

In the end, Gladys had to accept that she had made a mistake, and people had suffered because of it. She knew that she would never be able to regain the trust of the public. However, she also knew that she had learned a valuable lesson. She had learned that science was not just about discovering new things, but also about being responsible and ethical.

Is this story FAKE? It was written by AI using elements of Julie Howard's story *A Wrinkle in Time*.
