

KOOL RAY™

LIQUID SHADE

Kool Ray™

Liquid Shade for Greenhouses

There is no better way to lower greenhouse temperatures during the heat of the day than with Kool Ray.

Kool Ray's highly reflective formulas work to divert the heat BEFORE it enters the greenhouse. The result is a green house that's easier to cool & a less stressful growing environment.

FEATURES & BENEFITS

- Bright white color reflects up to 85% of solar energy
- Reduces greenhouse temperatures
- Highly concentrated liquid dilutes readily with water for fully-customizable shade levels
- Safe for use on plastic and glass
- Non-toxic, non-hazardous ingredients
- Environmentally responsible formulation
- Mixes easily, applies evenly
- Cost-effective
- Can be sprayed, rolled or brushed on
- Washes off gradually. In most cases, no extra removal step is required.

PACKAGING

- 1 GAL can
- 5 GAL pail
- 55 GAL drum

X-tra Stick™

Adhesive Additive for Kool Ray

Increase Adhesion & Extend Wear of Kool Ray by adding X-tra Stick

X-tra Stick is an adhesive additive, when used with Kool Ray it will increase adhesion, wear & overall life. X-tra Stick is primarily used when shading glass greenhouses.

To insure a uniform blending of the X-tra Stick Binder with Kool Ray, it is best to add the X-tra Stick Binder AFTER partially diluting the Kool Ray with water. Mix thoroughly. Then add the remaining amount of water & continue mixing until thoroughly blended.

RECOMMENDED X-TRA STICK ADDITIONS:

- Light Adhesion – Add **4 ounces** of X-tra Stick Binder to each gallon of Kool Ray concentrate used.
- Medium Adhesion – Add **8 ounces** of X-tra Stick Binder to each gallon of Kool Ray concentrate used.
- Strong Adhesion – Add **12 ounces** of X-tra Stick Binder to each gallon of Kool Ray concentrate used.

Note: Only calculate X-tra Stick additions to the corresponding amount of concentrate used BEFORE dilution with water.

X-tra Stick ADDITIONS FOR USE OVER PLASTIC:

In most instances X-tra Stick Binder is NOT needed when shading plastic glazing with Kool Ray. However, if longer wear over plastic is desired, it is recommended to first start out at the light adhesion amount of 4 ounces of X-tra Stick for each gallon of Kool Ray concentrate used in order to lessen potential removal problems later.

Note: Be careful to avoid adding too much X-tra Stick to Kool Ray (unless removal is not a concern) when shading plastic. Otherwise removal of Kool Ray by mechanical and/or chemical means may be necessary which could cause damage to the plastic.
