

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

ANGRAECUM CHAMAEANTHUS

Origin: Africa

Temperatures: Warm to cool growing miniature size orchid species

Light: Bright shade

Watering & fertilizing: Regular watering and fertilizing year-round.

General care: One of the most sought after and hard to find micro miniature Angraecum species – these plants are REALLY TINY!!! We are very excited to be able to share few of these babies, they are all newly mounted blooming size plants, many in spike now. Great addition to any miniature orchid collection and very limited! Grows best under cool to warm conditions, in bright shade, mounted and very little or no moss - it is a twig epiphyte and likes to dry out. Great plants for terrariums, vivariums, glass orbs, windowsills, greenhouse growing and outside in proper zones.
