

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

BRACHIONIDIUM STELLARE AFF.

Origin: Peru

Temperatures: Intermediate to cool growing miniature size orchid species

Light: Bright shade or filtered bright light

Watering & fertilizing: Regular watering and fertilizing year-round.

General care: Brachionidium orchids are very rare in cultivation, and they are well known for being quite hard to grow and thrive. This particular plant came from Peru and we are very certain it is Brachionidium stellare or its affiliation. This particular Brachionidium species seems much easier to grow and bloom in cultivations and love to grow in live sphagnum moss! Grows best under cold to intermediate, in shade and high humidity with air movement, needs night temperature drop. Only good quality water. Can be grown potted or mounted. Great plant for terrariums, vivariums, glass orbs, vases, indoor growing on windowsills or greenhouses and outdoors.
