MICRO, MINIATURE AND SMALL ORCHIDS

## BULBOPHYLLUM POLLICULOSUM

**Origin:** Thailand, Vietnam Myanmar

**Temperatures:** Cool to hot growing miniature size orchid species

**Light:** Bright shade

**Watering & Fertilizing:** Regular watering and fertilizing in active growing season, high humidity, keep dry when completely dormant and no fertilizing from fall till new growths.

**General care:** Miniature Bulbophyllum species with attractive marbled pseudobulbs and stunning blooms, fairly new in cultivation. It is enough to grow this one just for its pseudobulbs, but once blooming, huge beautifully shaped blooms are quite eye catching. Grows best under hot to cool conditions, in bright shade, constant high humidity, regular watering and fertilizing in active growing season, completely dormant for the winter time - stop fertilizing end of October, and do not water when all leaves are gone - light misting to keep pseudobulbs from shrinking, till new growths appear late spring or early summer. Great for greenhouses, windowsills, terrariums / vivariums or outdoors year - round in proper zones.
