

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

DENDROBIUM CHITTIMAE

Origin: Asia

Temperatures: Warm to cold growing small / medium size orchid species

Light: Bright light

Watering & Fertilizing: Regular watering and fertilizing in active growing season, goes dormant – no fertilizer from October and only light mist during dormancy till new growths appear in the spring time.

General care: This is new addition to our collection – not commonly seen Dendrobium with beautiful blooms. Since these are fully deciduous, we follow the same culture – no fertilizing from October and no watering during winter time when leafless till we see new growths starting. Light mist once a week to keep pseudobulbs from shriveling. This grows best under cold to warm conditions, in bright light with good air movement. Can be grown potted or mounted. Great plants for windowsills, greenhouse growing or outside in proper zones.
