

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

DENDROBIUM KANBURIENSE

Origin: Thailand

Temperatures: Hot to warm growing miniature orchid species

Light: Bright shade / bright light

Watering & Fertilizing: Semi - deciduous species - regular watering and fertilizing in active growing months, keep drier and no fertilizer in the winter time.

General care: Semi - deciduous Dendrobium from Stachyobium family, need good watering and fertilizer when actively growing, stop fertilizing in October and reduce watering in the winter time – oldest canes will shed the leaves. Blooms usually appear in the middle of the growing season, summer to early fall, together with the new growths. Bright shade in the summer time, bright light in the winter. Grows great potted or mounted outside in Florida year-round, perfect for windowsills, and greenhouse growing.
