

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

DENDROBIUM CONSTRICTUM / MIMIENSE

Origin: Bismarc Islands & Papua New Guinea

Temperatures: Warm to intermediate growing small size orchid species

Light: Bright light

Watering & Fertilizing: Regular watering and fertilizing in the summer, less in the winter – semi deciduous – old canes will shed leaves.

General care: Easy warm growing small Dendrobium species with amazing clusters of white blooms. These are well established NBS plants that should bloom within next year. They grow well potter or mounted and opposite to majority Dendrobiums they prefer shadier location and good air movement. They are semi-deciduous and will shed leaves on oldest canes. We stop fertilizing in October and reduce watering in the winter till new growths appear. Perfect plants for windowsills, greenhouses and outside growing year-round.
