MICRO, MINIATURE AND SMALL ORCHIDS

## DENDROBIUM TORESSAE

**Origin:** Australia

**Temperatures:** Cool to hot growing miniature size creeping orchid species

**Light:** Bright light

**Watering & Fertilizing:** Regular watering and fertilizing year-round.

**General care:** This mini miniature Australian species is attractive even when not blooming. Very thick tiny leaves look more like succulent than orchid. Once blooming, plant is covered with small yellowish blooms. This species is well known for ultra slow growing and getting them to this size takes many years! Grows best under hot to cool conditions, in bright light, good air movement. Due to creeping growing habit does best when mounted, and must dry between waterings. Perfect plant for windowsills, terrariums, vases, greenhouses and outside growing year-round.
